## **Inleiding**

Voor het negende jaar op rij slagen we erin een overzicht te geven van de midmaandelijke watervogeltellingen in de regio.

De resultaten werden eveneens reeds overgemaakt aan het Instituut voor Natuurbehoud, organisator van de tellingen op nationaal vlak.

Dank zij de welwillende medewerking van Paul Willems en Marc De Ceuninck (lay-out en grafieken) werd het opnieuw een verzorgde uitgave.

## **Organisatie 2004/2005**

De organisatie verliep grotendeels vlekkeloos – alle voorname gebieden in de regio werden geteld. Alleen in de regio Beernem deden zich tijdelijke problemen voor door gelijktijdige ziekte van onze twee hoofdtellers aldaar, Egon Niesen en Gabriel Wieme. Een woord van dank aan David en Romain die hun gebieden zo goed mogelijk overnamen.

De nieuwe gebiedsindeling die we voor het telseizoen 2003/2004 opstelden werd ook dit winterhalfjaar gehanteerd en gerespecteerd.

Herhaalde oproepen en constant contact via de [www.mergus.be](http://www.mergus.be) website en het feit dat de tellers nu via een elektronisch formulier konden doorgeven hadden een positieve invloed!

Hoofdconclusie: van de tien voornaamste watervogelgebieden in de regio zijn maandelijks telgegevens voorhanden!

## **Toekomst.**

Op nationaal vlak werd aan een on-line invoerformulier en bestand gewerkt en dat is ondertussen af. D.w.z. dat de tellers vanaf dit winterhalfjaar (2005/2006) rechtstreeks kunnen invoeren in de database van het Instituut en dat ze omgekeerd ook hun tellingen kunnen opvragen. De eerste tellingen werden reeds in oktober 2005 ingegeven en alles laat vermoeden dat het nieuwe systeem veel tijd en werk zal sparen!

Tot slot zullen de watervogeltellingen in vogelrichtlijngebied ook opgenomen worden in het monitoringsproject rond de compensatie van de Achterhaven – voor ons een extra stimulans om aandachtig en nauwkeurig te tellen.

## Dankwoord

Een welgemeend woord van dank aan onze vaste telkern:

**Georges De Putter en Jan Trotteyn** (Voorhaven), **Dirk Vantorre** (Kleiputten Heist en afleidingsvaarten), **Paul D'hoore** (Zeekanaal + Lissewege), **Guido Burggraeve** (Zwin), **Marc Van de walle** (Zwinstreek), **Werkgroep Uitkerkse Polder** (Uitkerke), **Norbert Mouton** (Vlissegem, Klemskerke), **Marnix Vandegehuchte** (Hoeke-Oostkerke), **NP-Damme** (Damme), **NP-Brugge** (Achterhaven), **Rudi Vantorre** (Heist), **Egon Niesen-David Herman** (Beernem, Oedelem, Sijsele,), **Gabriel Wieme** (Miseriebocht Beernem), **Koen Devos-Steven D'haese** (Ettelgem, Roksem), **Frank De Scheemaeker** (Dudzele-Koolkerke), **Jozef Vansteenkiste** (Meetkerke), **Nicholas Endriatis** (Blauwe Toren, Sint-Pieters, Polderwind). **Dirk Van Torre** (Heist), **Chantal Martens** (Lapscheure), **Marc De Ceuninck** (Sijsele-Oedelem). **Romain Deloof** (Oostkamp), **Wim Lammerant** (Sint-Andries), **Philippe Recour** (Loppem), **Guido Orbie** (Loppem-Sint-Michiels), **Eric Hermy** (Assebroekse Meersen), **Johan Lammerant** (Zerkegem), **Johnny Mylle** (Stalhille), **Ivan Leroy** (Aartrijke), **Luc De Cat** (Zedelgem) en **Johan Van de Pitte** (Brugge-Centrum). En verder al diegenen die aanvullingen aanbrachten, die ik mocht vergeten zijn en diegenen die meetelden op de gemeenschappelijke excursies in Damme en de Achterhaven.

## Aankoop

Het watervogeloverzicht wordt gratis aangeboden aan de tellers. Niet-tellers geïnteresseerden kunnen het aankopen door storting van 3 EURO op rekeningnummer 380-0084815-11 van Mergus, p.a. Pastoriestraat 174, 8200 Brugge, met vermelding van het gewenste nummer, b.v. 2004/2005

## Vergelijking aantallen 2004-2005 met het gemiddelde van de periode 1996-2004

De resultaten van de winter 2004-2005 lijken een vrij normaal verloop weer te geven in vergelijking met de aantallen van de vorige jaren. Topaantallen komen niet voor, de meeste soorten scoren wat de aantallen betreft minder. De reeks van zeven opeenvolgende zachte winters mag als een van de hoofdredenen aangehaald worden.

De midmaandelijkse aantallen voor o.a. **Dodaars, Fuut, Bergeend, Wilde Eend, Tafeleend, Kuifeend en Meerkoet** zijn daar een illustratie van. Ze liggen ongeveer de ganse periode onder het gemiddelde van de voorbije jaren.

**Krakeend** doet het bijzonder goed en piekt nog in maart.

Voor **Slobeend** haalden we vanaf januari opvallend mooie aantallen.

Zeer matige aantallen vinden we net als vorig seizoen bij de **Tafeleend**. Vroeger algemeen aanwezig op de jonge zandwinningsputten in de regio. Nu afwezig op diezelfde putten. Geen voldoende voedsel meer aanwezig?

In het seizoen 2003-2004 noteerden we reeds een sterke terugval voor **Brilduiker** en **Middelste zaagbek**. Dit zet zich dit seizoen nog verder door met opvallend lage aantallen in vergelijking met het gemiddelde en dieptepunten voor de voorbije jaren.

De 10 meest voorkomende soorten deze winter zijn:

|         |              |       |
|---------|--------------|-------|
| 1 (1)   | smient       | 85286 |
| 2 (2)   | wilde eend   | 41201 |
| 3 (3)   | meerkoet     | 17620 |
| 4 (5)   | waterhoen    | 8067  |
| 5 (4)   | wintertaling | 7296  |
| 6 (6)   | kuifeend     | 3827  |
| 7 (9)   | slobeend     | 2848  |
| 8 (7)   | aalscholver  | 2385  |
| 9 (8)   | bergeend     | 2324  |
| 10 (10) | fuut         | 1748  |

Het zijn dezelfde soorten als vorige winter, met dezelfde top 3 (cijfer tussen haakjes is situatie in seizoen 2003-2004) en voor de rest kleine verschuivingen.

## Verschuivingen van Smient van achterhaven naar Polder?

De verwachting dat er zich een verschuiving voordoet en dat de polderzone belangrijker wordt lijkt hierbij bevestigd.

Met als steekproef de aantallen van januari van de voorbije jaren( periode 1997-2005), leveren zowel de procentuele als absolute cijfers een bevestiging van die verschuiving.

Smient – foto Yves Baptiste →

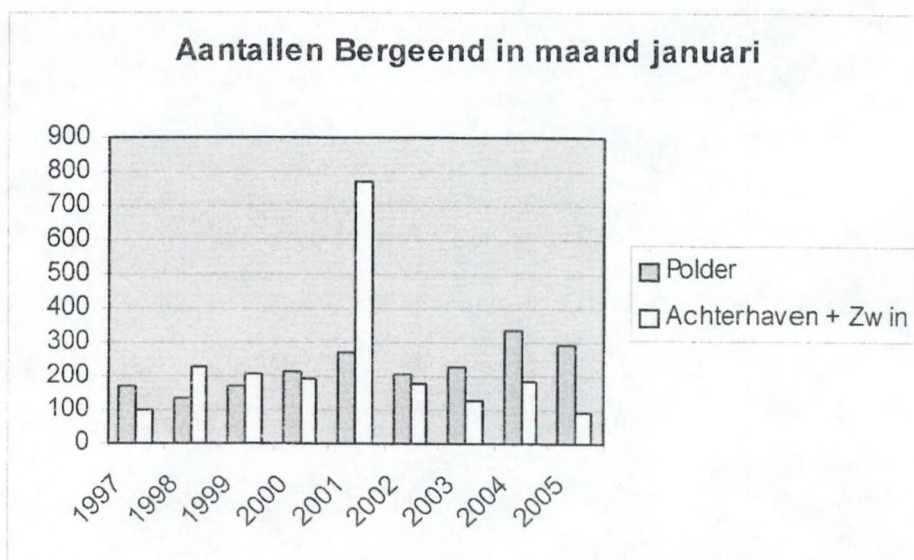

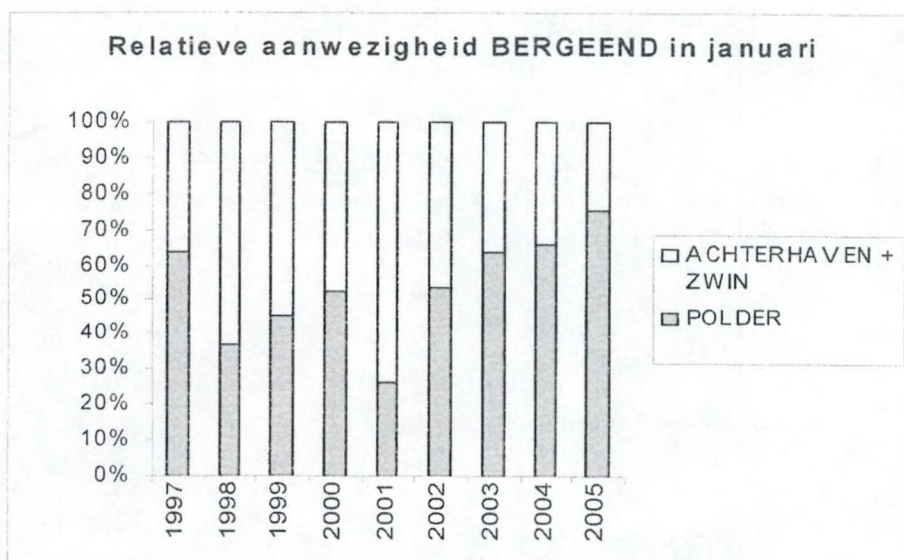

## Verschuivingen van Bergeend van achterhaven en Zwin naar Polder?

De verwachting dat er zich een verschuiving voordoet en dat de polderzone belangrijker is hier minder uitgesproken.

Met als steekproef de aantallen van januari van de voorbije jaren, leveren zowel de procentuele als absolute cijfers een bevestiging van een verschuiving die toch minder uitgesproken lijkt dan bij de Smient.

## Verhouding grondeleenden, duikeenden en futen.

De voorbije 10 jaar lijkt dit constant. De verhoudingen veranderen over de voorbije jaren nauwelijks:
