In memoriam Carlo Heip

On 15 February, our former director Carlo Heip (1945-2013) passed away after a prolonged illness. Carlo Heip studied biology at Ghent University, where he graduated on a study of the ecology and population dynamics of meiobenthos, small organisms living in the sediment. His study site was a small brackish-water pond but his **main** interest was the open ocean and his peers were international colleagues. He founded a research team on marine biology at Ghent University that still persists. At this time he wrote a seminal paper on the ecology of marine nematodes, focused on the functional role and ecophysiology of meiobenthos and developed the use of meiobenthic diversity as a tool in bio-monitoring. As the chairman of ICES' benthic ecology working group, he organized the large North Sea Benthos Survey in 1986.

In 2006, Carlo Heip became director of NIOZ at Texel, where he remained until his retirement in 2011. As director he managed to lead the institute to an excellent peer review in 2011. He also prepared the merger of the Centre for Estuarine and Marine Ecology of NIOO-KNAW in Yerseke with NIOZ, thus bringing together the two Dutch institutions to which he had devoted his professional life under the umbrella of the Netherlands Organization for Scientific Research (NWO).

Carlo Heip had the leadership and vision that made him an excellent organizer, both as a director and as a coordinator of the numerous international initiatives he was involved with. He had an innovative and creative mind and a special gift for summarizing the essence of a scientific field or debate. He was, above all, a people manager. He stimulated his collaborators by giving them respect, trust and strategic guidance.

From the early 1990's onwards, he was very active as a Projectleader and coordinator of European research projects in Land-Ocean Interaction studies. Within the scientific study of global change, he had the strong feeling that biodiversity issues were underrepresented and that the field was splintered.

For this reason he actively engaged in several initiatives to bring together the relevant partners.

This resulted in several initiatives, of which the European Network of Excellence MARBEF (Marine Biodiversity and Ecosystem Function) was the most

important one. MARBEF united ecologists and taxonomists on a European scale in a joint effort to provide the protection of the biodiversity of marine life with a sound scientific basis. This European project also stimulated world-wide initiatives to better understand and describe the diversity of marine ecosystems.

In 2006, Carlo Heip became director of NIOZ at Texel, where he remained until his retirement in 2011.

As director he managed to lead the institute to an

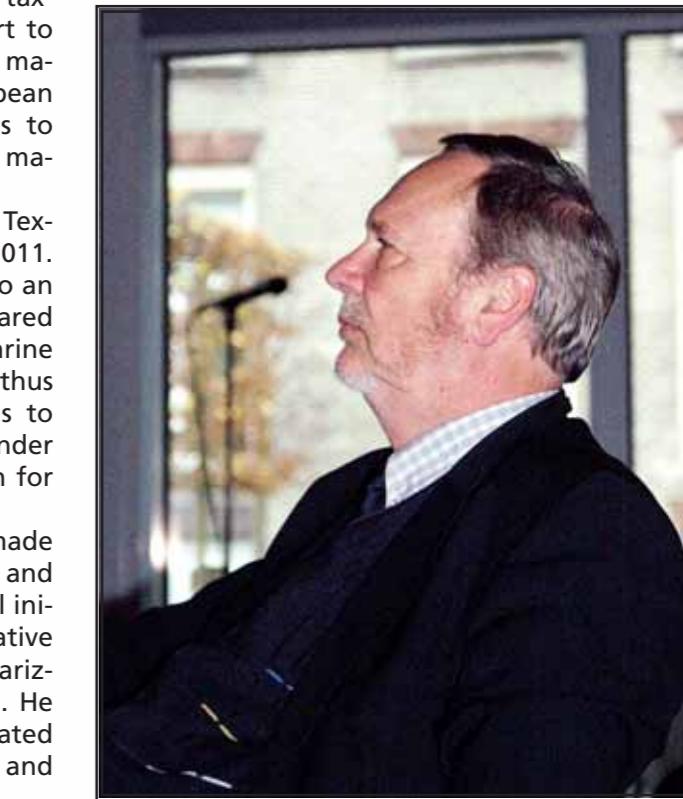

excellent peer review in 2011. He also prepared

the merger of the Centre for Estuarine and Marine

Ecology of NIOO-KNAW in Yerseke with NIOZ, thus bringing together the two Dutch institutions to which he had devoted his professional life under the umbrella of the Netherlands Organization for Scientific Research (NWO). Carlo Heip had the leadership and vision that made him an excellent organizer, both as a director and as a coordinator of the numerous international initiatives he was involved with. He had an innovative and creative mind and a special gift for summarizing the essence of a scientific field or debate. He was, above all, a people manager. He stimulated his collaborators by giving them respect, trust and strategic guidance.

Carlo had a drive for nature. He was keen on bringing scientific knowledge to the policy and management level and to improve coastal and marine management. He was involved in local and regional estuarine management, as well as in European and worldwide programs for the protection of biodiversity. And above all, he was a warm personality with a good sense of humour, who enjoyed all good things in life.

Peter Herman

From the directorate

Gaining insight in the complex and dynamic marine ecosystems and environments is of vital importance for modern society and at the heart of the mission of Royal NIOZ. Our activities, our mission, our multidisciplinary research, including frontier applied studies, our modern research facilities, labs, and research vessels, are all dedicated to this task. Furthermore, NIOZ supports academic and applied marine and maritime research with know-how and infrastructure in the Netherlands and abroad, and we continued to do so in 2013.

Research at NIOZ continued to focus on marine environments globally, in estuaries and deltaic settings, from polar regions via temperate zones to tropical coral reefs, and into the depths of the oceans. NIOZ was and is a respected and trusted partner in a multitude of national and international efforts to improve our understanding of the changing oceans, and for paving the way to improved and sustainable use of them in terms of global food, energy and other natural resources for broad scientific and societal benefit.

In the year 2013, NIOZ scientific productivity reached an all time high with over 263 peer reviewed publications, including 59 open access papers, 11 PhD theses, more than 220 professional papers and well over 600 outreach and media contributions. It was also the year where NIOZ was very successful in the various national NWO/STW 'topsector' calls, and where the Principal scientists of our biogeochemistry

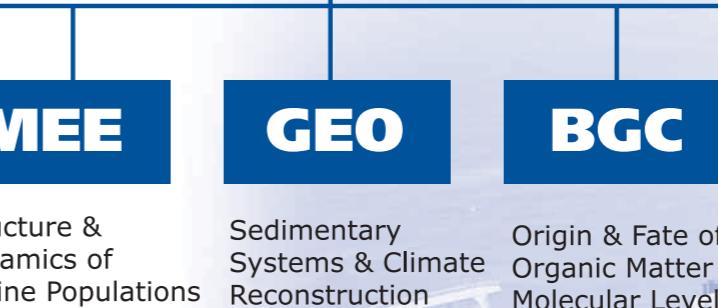

department prof. Jaap Sinninghe Damsté and prof. Stefan Schouten, as leading members of two national research consortia, were awarded the prestigious NWO/OCW 'Zwaartekracht' grants from the Netherlands Organisation for Scientific Research (NWO) and the Ministry of Education, Culture and Science (OCW); the largest research grant of its kind in The Netherlands. Moreover, prof. Stefan Schouten received an advanced ERC grant as well. Kees Camphuijsen won The Academic Year Price 2013.

The year 2013 was in many respects a difficult year for the institute. The sad and too early demise of prof. Carlo Heip, just retired from his long standing general directorship of Royal NIOZ, left us all impressed and speechless. He will be remembered as an excellent, world-leading scientist in the field of Biodiversity, and a nationally and internationally highly respected leader of the institute. More mundane, issues arose as well, linked to the global economic crisis, the general political environment, and financial management. As a consequence, the institute was, is, and will be facing serious budgetary reductions in 2014 and the years to come. Yet, also in these troublesome times we will have to face them and move forward.

From the board

On 15 February 2013 NIOZ was shocked by the sad loss of prof. Carlo Heip after a relatively short period of fatal illness. Carlo Heip will be remembered by the Board not only as an eminent scientist and director of NIOZ but also as a good colleague, friend and amiable person. Carlo Heip was appointed as part-time director of NIOZ on 1 October 2006 in conjunction with his directorship of CEME in Yerseke. After a highly fruitful five-year period of growth, improved governance and strongly increasing scientific achievements of NIOZ, Carlo Heip retired as general director on 1 October 2011, just before the successful merger of NIOZ-Texel and what is now known as NIOZ-Yerseke was formally concluded.

Prof. dr. M. Vincx was appointed by the Board of NWO on 1 January 2013. Prof. dr. T.M. Elzenga (University of Groningen, CEES) left the board on 1 November 2013. In 2013 Board and directors convened six times, on 28 February (Yerseke), 17 May (Texel), 9 July (Utrecht), 22 August (Texel), 25 October (Utrecht) and 28 November (Texel). Moreover, during the Board meetings of 17 May and 28 November the chairman and members of the Board conferred with the Works Council of NIOZ. Board meetings were attended by prof. dr. W.P.M. de Ruijter (IMAU, Utrecht University) on behalf of the NIOZ Science Committee, as well as by drs. R.M.L. Schorno on behalf of the general director of NWO.

On 5 March the annual bilateral consultation between the Board of NWO and the Board of NIOZ took place. On 20 November the Board of NWO consulted with the chairmen of all NWO research institutes. Discussions during these meetings mainly focussed on the financial constraints of NIOZ Texel in conjunction with NIOZ Yerseke, the renewal of the NIOZ Science and Strategic Planning, the developments concerning the renovation and commercial exploitation of the NIOZ harbour, the structural

deficit of the exploitation costs of R.V. Pelagia, and the establishment of the Caribbean Netherlands Science Institute (CNSI).

The chairman of the NIOZ board met several times with the chairman of the Board and the director of NWO to discuss the long term role and funding of Pelagia and ocean research. Van der Kamp and Elzenga, as members of the Audit Committee, had several meetings with the NIOZ controller and the external accountants of KPMG. Koster attended meetings of the steering committee of CNSI.

During 2013 research retained its excellent standard. Several NIOZ research groups are working at the forefront of their field internationally and their research has an important impact in the field. Leading scientists obtained substantial research grants in a highly competitive national and international granting framework. In scientific and professional reviews and in public media NIOZ research has been recognized as scientifically leading and highly relevant for society.

Discussions continued with the Division of Earth and Life Sciences of NWO as well as with the General Board of NWO with respect to the financial contribution to the maintenance and operation of the R.V. Pelagia. A new business plan for the Pelagia has been presented, stressing the international importance of the ship for the high level of marine research by the Netherlands scientific community. Initial steps towards a 'national marine board' have been taken in cooperation with other scientific and commercial partners in the marine field. Its task will be to formulate a 'national marine vision for marine infrastructure in The Netherlands'. Good progress has been achieved in the establishment of a NIOZ Holding structure including the NIOZ-Harbour private limited liability company (NIOZ Haven B.V.).

During the year severe financial deficits came to light in the annual accounts of 2012 and 2013. These were partly due to the transition to a different accounting system, but also caused by somewhat optimistic estimates of revenues from overhead and profits from a multitude of scientific and commercial projects and a decrease in the annual funding of NIOZ by NWO.

Pier Vellinga
Chairman of the Board

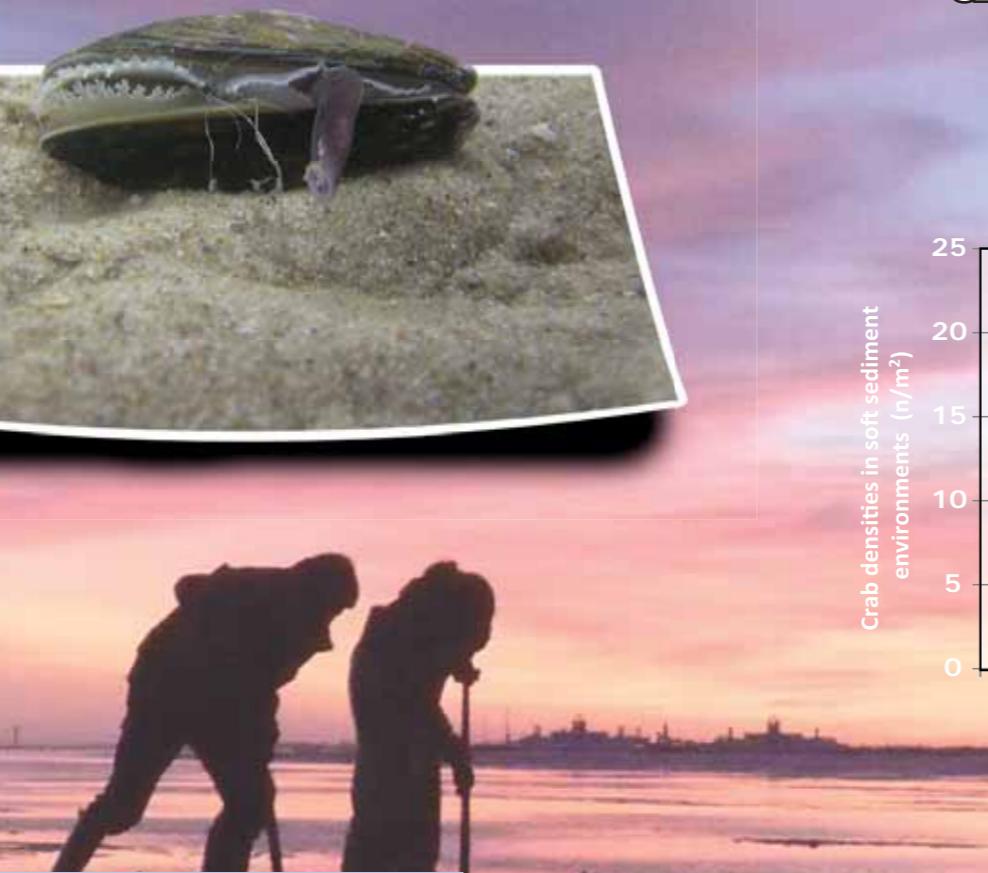

As per 31 December 2013, the Board consisted of the following members:

- prof. dr. E.A. Koster: Utrecht University, Faculty of Geosciences
- prof. dr. M. Vincx: Ghent University, Faculty of Sciences, Marine Biology Research Group
- ir. A. Lubbes: Fugro, Leidschendam
- prof. dr. ir. P. Vellinga (chairman): Wageningen University and Research Centre
- mr. G.F.C. van der Kamp: Bussum
- prof. dr. J.L. Olsen: University of Groningen, Centre for Ecological and Evolutionary Studies (CEES) (not present when picture was taken).

Ecology and Physics, a world apart?

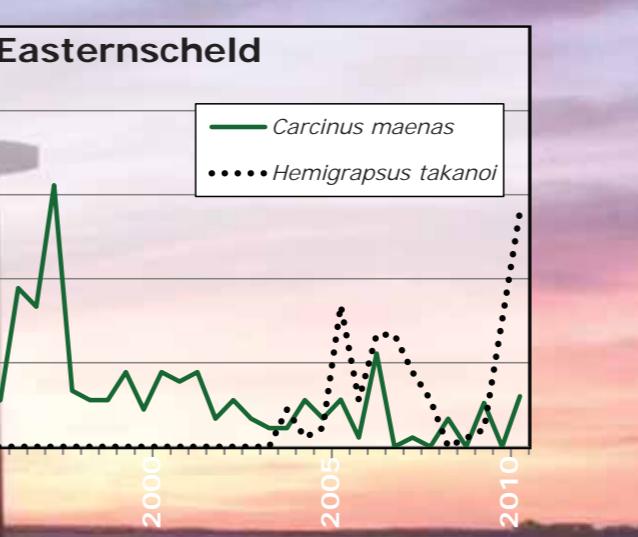

A labyrinth pattern in a mussel bed

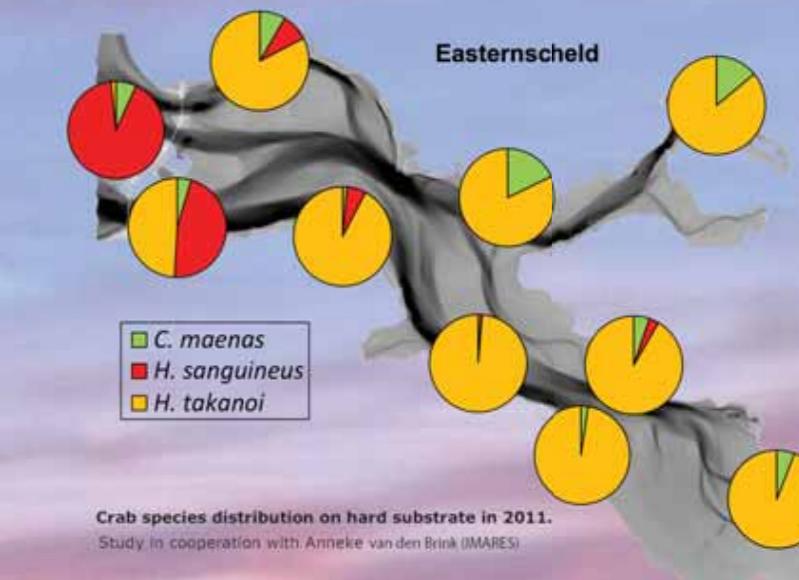

Is fundamental physics relevant for ecology? Do ecologists have to read Einstein? Yes, is the answer! It turns out that the movement and aggregation of mussels during the formation of mussel beds is a process that has well-known counterparts in physics. Mussels move a lot while alone or in dense crowds, but move less when encountering a clump of the right – intermediate – size. In this way, they form regularly spaced clumps. Similar density-dependent movement is also essential for the formation of alloys of for instance iron and steel, which separate out to form similar patterns. While aggregating into dense clumps, their movement becomes increasingly similar to random Brownian motion, due to collisions with other mussels. Here, mussel movement is shaped by the same mechanism as Einstein proposed for Brownian motion in atoms and molecules in solutions: collisions. It seems that even in the 21st century, we can identify universal principles that cut across the various disciplines of the natural sciences.

Competition between Asian and European shore crabs

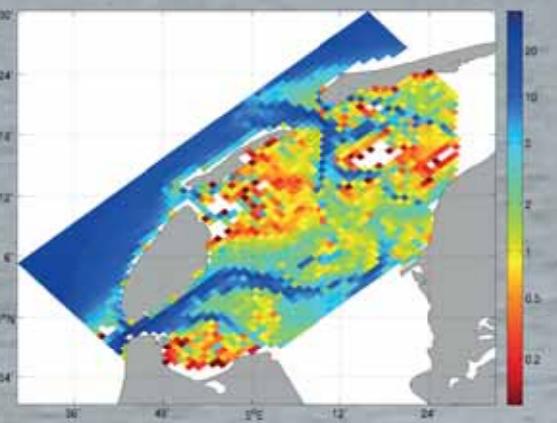

Sander Wijnhoven, Monitor Taskforce
sander.wijnhoven@nioz.nl

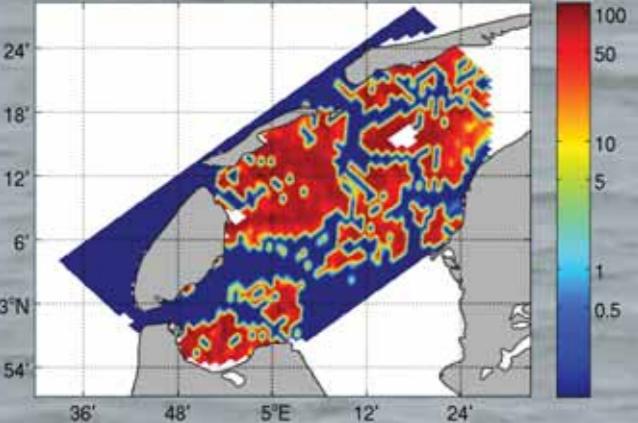

Exotic species are often mentioned as the reason for the decline of species that originally live in our waters. This was also the case when two Asian shore crab species (*Hemigrapsus takanoi* & *Hemigrapsus sanguineus*) were co-incidentally introduced in our waters and the formerly abundant European shore crab (*Carcinus maenas*) was getting rarer. The Asian species were successfully expanding all over the Delta region and behaved more aggressive than their European counterparts. However, from the long-term monitoring data series of the Monitor Taskforce it became clear that European shore crab populations were already declining far before the arrival of the exotic species in 1999 and their appearance in the samples from soft sediment environments in 2004. A similar pattern was observed in the other Dutch delta waters with European shore crab numbers already declining for decades and Asian shore crabs not abundant until recently. When both present, Asian shore crabs do nowadays expel young European shore crabs from their preferred shelter places into the open sandy bottom areas, where risks of being eaten are much higher. Competition of Asian shore crabs is not the initial cause of the decline of the European shore crab populations, but is definitely an additional problem.

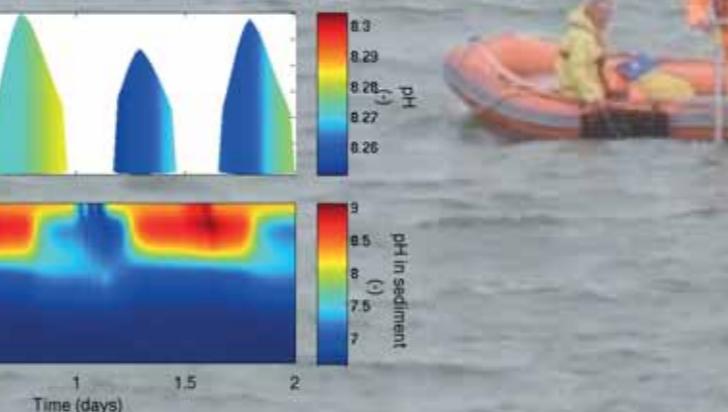

INTERTIDAL

New computer model for ecosystem dynamics in the Wadden Sea showing the depth in 1 km grid points (coloured squares). All biological processes are calculated in each grid point; the coupled water flow model calculates the rates of transport between the grid points.

Algal growth ($\text{mg C m}^{-2} \text{ d}^{-1}$) on Wadden Sea floor. Production by these algae is responsible for 10-20% of the total algal production in the Wadden Sea.

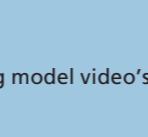

Model of pH in an intertidal grid-point. Dynamics in the water column are controlled by the tide. Dynamics in the sea floor are controlled by light availability. During the day, algae use CO_2 and cause a pH increase. During the night, algae and bacteria produce CO_2 and decrease the pH.

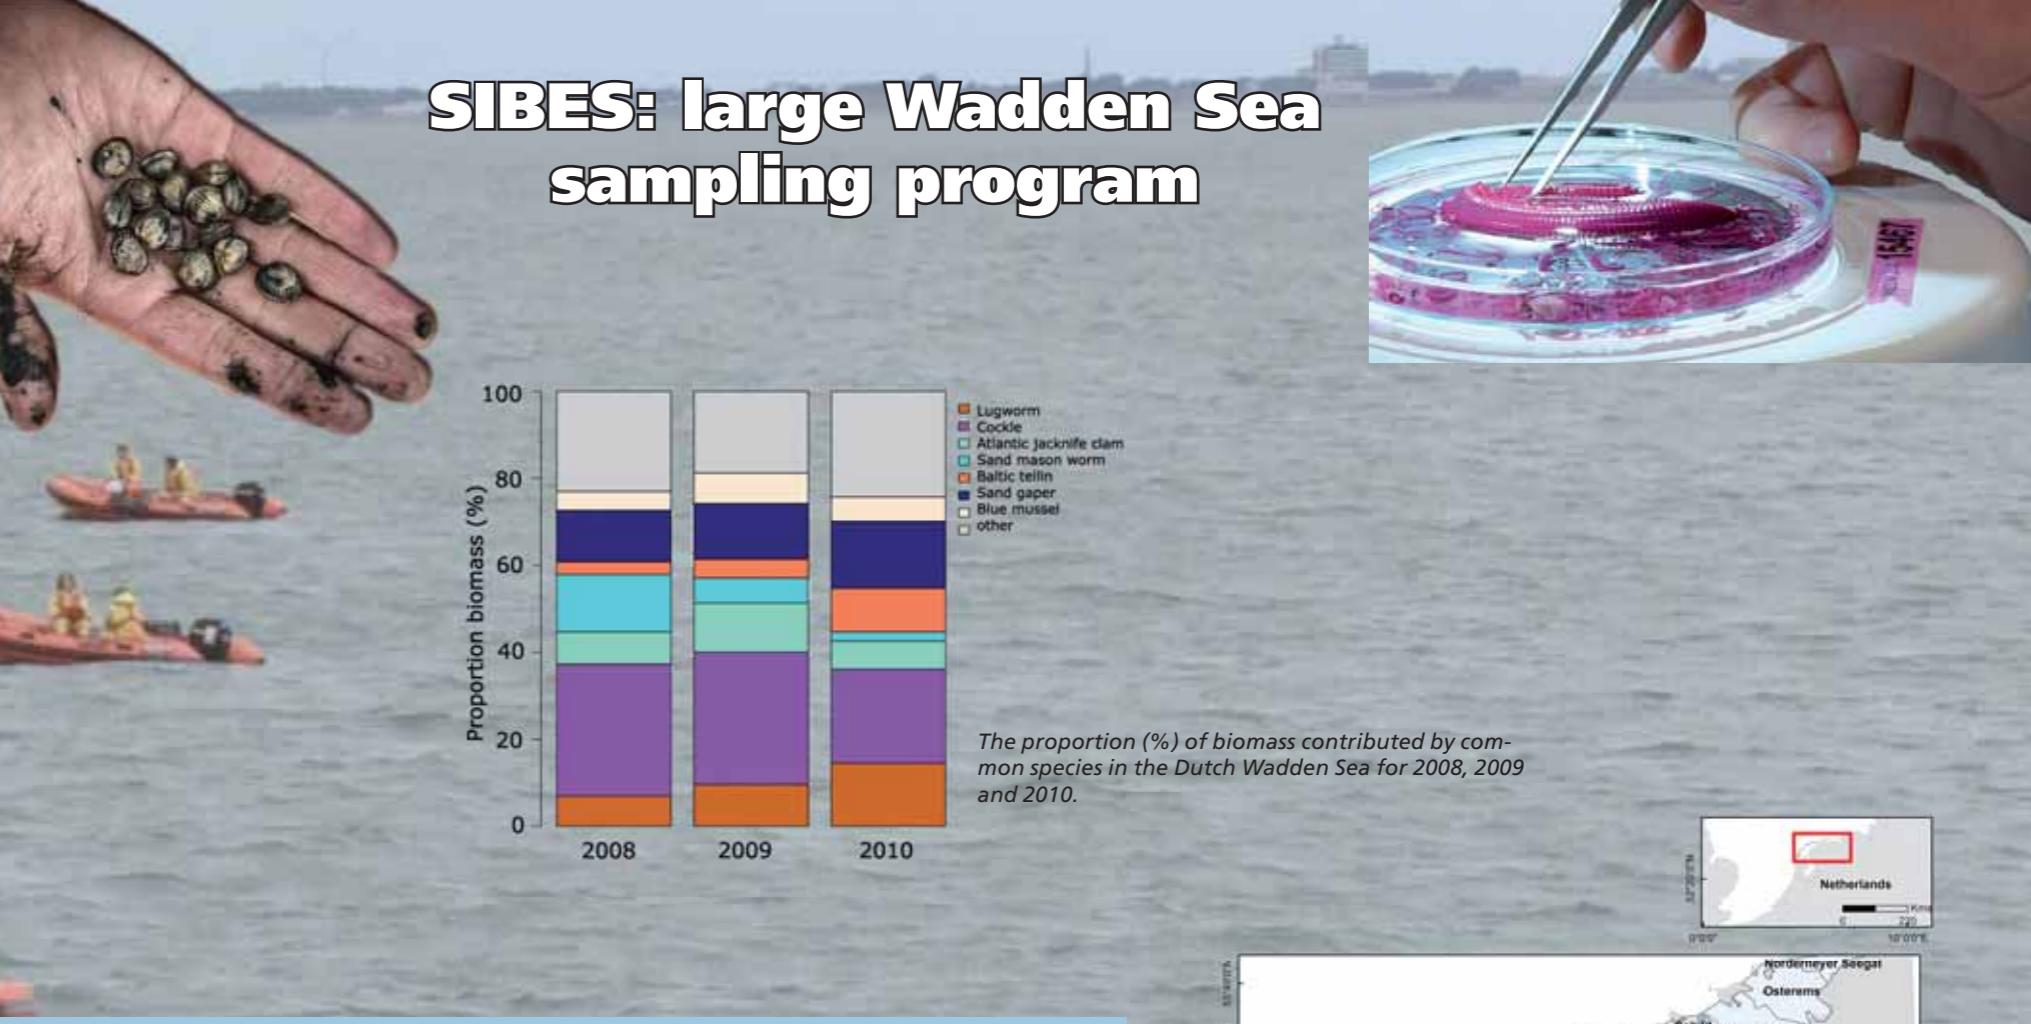

Any time, any where:
a new model for fine scale
ecosystem dynamics

Merging a model of the physical aspects of the western Wadden Sea (GETM) with an ecosystem model developed for European regional seas (ERSEM) resulted in a new improved model. This model describes algal growth and production at the basis of the food web in reaction to available nutrients, grazing on the algae by animal plankton and shellfish, and mineralization by bacteria. It includes both the deeper parts of the western Wadden Sea remaining permanently submerged as well as the tidal flats emerging during low-tide. Using the model, physical, chemical and biological variables can be simulated throughout the seasonal cycle and at places where they have not been measured. Entirely new for any model is the inclusion of algae which live attached to the surface of the sea floor. These benthic algae are responsible for 10-20% of the total algal production in the Wadden Sea; an aspect which has been largely neglected until now in modelling.

SIBES: large Wadden Sea sampling program

The proportion (%) of biomass contributed by common species in the Dutch Wadden Sea for 2008, 2009 and 2010.

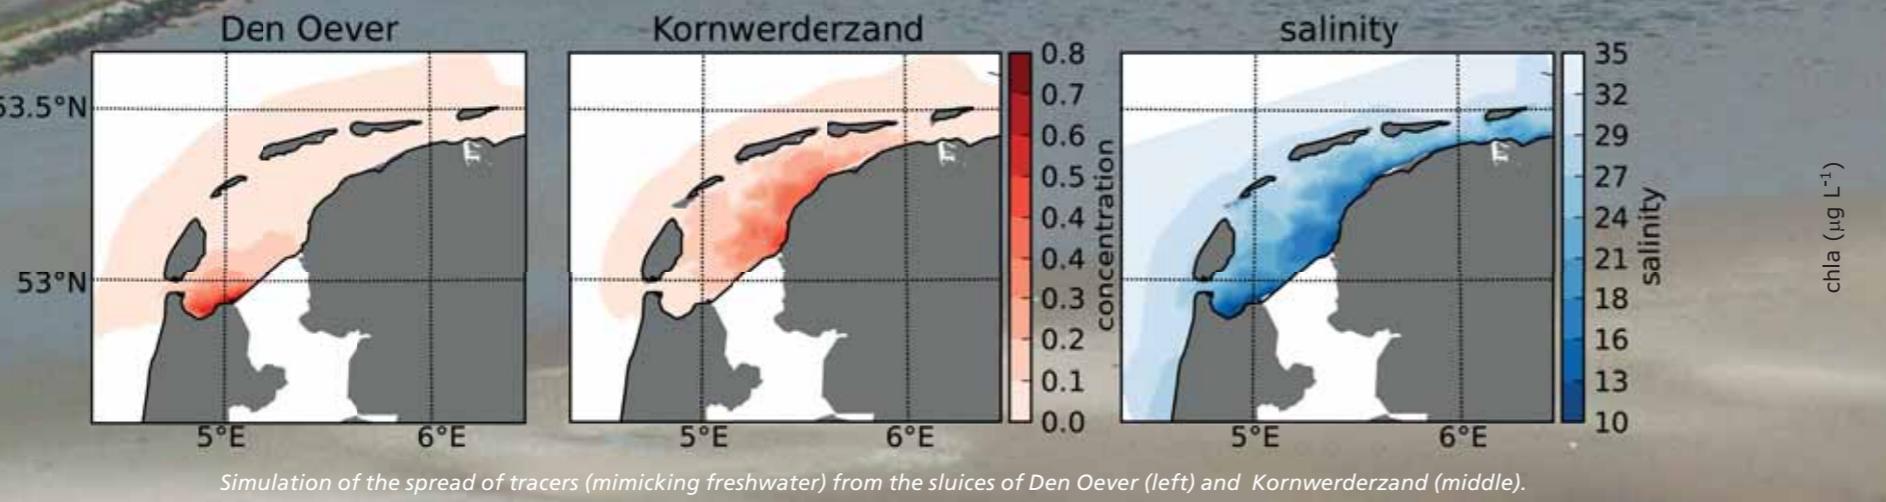

The Wadden Sea is a large expansive tidal flat area that is key for migratory shorebirds and North Sea fishes due to its high biomass of communities of organisms which live in and on the tidal flats (macrobenthic communities). Based on appearances this area might be mistaken as a homogenous habitat. Instead, steep environmental gradients and heterogeneous sediments dominate this area. The data from the Synoptic Intertidal benthic surveys (SIBES), a large tidal flat sampling program, identified differences in species composition from west to east and in the Dollard region. For example, bivalve species like sand gapers are found more in the western Wadden Sea while common cockles are more abundant in the eastern Wadden Sea. Consistent with these differences, a model integrating environment and species data identified that the Wadden Sea is a heterogeneous ecosystem that supports a wide variety of macrobenthic communities.

INTERTIDAL

Pathways of fresh water in the Wadden Sea

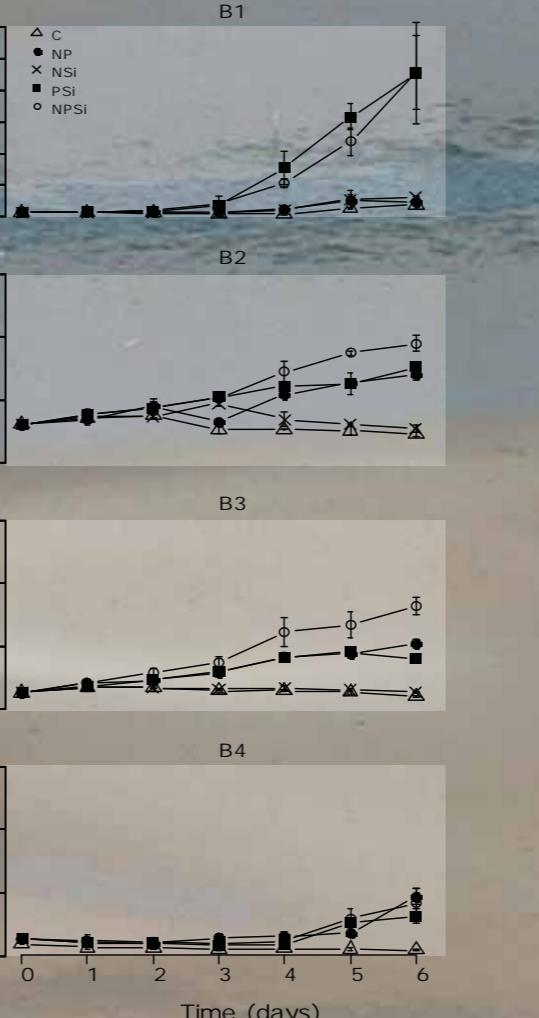

The two sluices in the Afsluitdijk are the principal source of fresh water in the Dutch Wadden Sea, but it has been a long-standing question how it spreads and where it leaves the Wadden Sea. On the basis of sparse measurements, it was commonly thought the major inlets Marsdiep and Vlie would also form the main exit for the fresh water. On the basis of high-resolution model results, we now get for the first time a detailed spatial and temporal view of the way the fresh water traverses the Wadden Sea. As expected, the Marsdiep plays a key role. But, surprisingly, the other major inlet, the Vlie, turns out to be much less significant: the tidal movement, involving huge amounts of water pushed back and forth through the inlet, does not, in the end, result in a large net exit of fresh water. Instead, the fresh water travels eastward, crossing the watershed south of Terschelling, and further. An example is shown in the figure. The significance of this finding goes beyond the fate of fresh water alone; it shows that transects with relatively small tidal prisms, like the watershed south of Terschelling, can be disproportionately important for the net exchange of water and any of its constituents (sediment, pollutants etc).

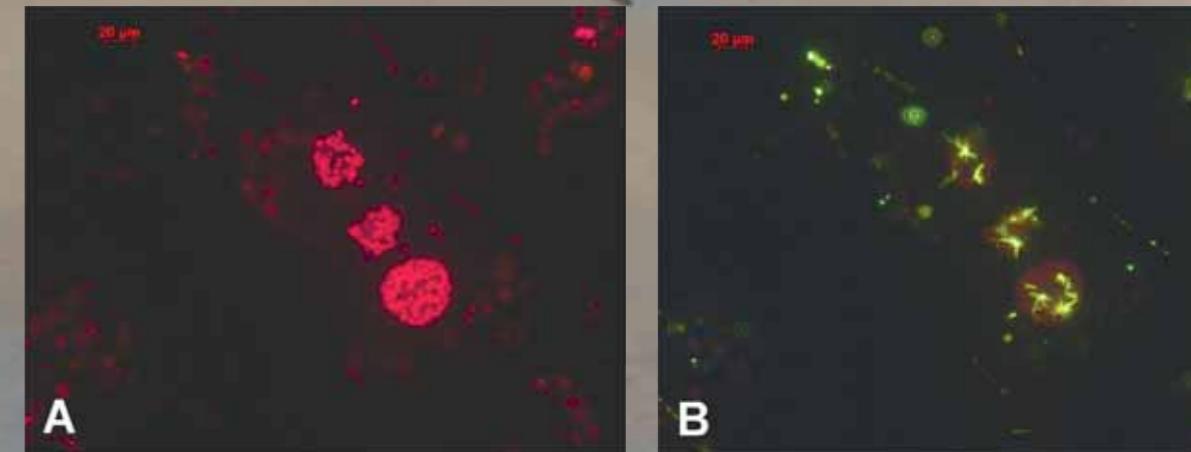

M. Duran Matute, Physical Oceanography
m.duran.matute@tue.nl

Long-term residual flows (per tidal period) in the western Dutch Wadden Sea, calculated from model results (GETM).

The effect of a combination of different nutrients during four 1-week bioassays (B1-B4) in April 2010. The depletion of Si in the water of the Marsdiep led to the disappearance of diatoms and to the rise of the nuisance algae *Phaeocystis*, responsible for the foaming of the water in this period of the year.

The pictures show the expression of the enzyme alkaline phosphatase (AP), visible as green fluorescence using the molecular probe ELF® (B), whereas the autofluorescence by the chloroplasts is visible as red fluorescence (A). Despite the fact that organic-P was apparently utilized by the algae, not all organic-P seems biological available. This needs further research.

Phosphate limits the growth of phytoplankton

The Wadden Sea is a unique coastal area with large intertidal areas separated from the North Sea by barrier islands. It is an important area for waders and is part of the north east Atlantic flyway. The ecosystem in the Wadden Sea is changing as a result of anthropogenic and climate induced factors. Since the mid '80-ies the inorganic N and P loads are decreasing, and this has affected the ecosystem foodweb and potential carrying capacity. Is the phytoplankton P-limited? The literature is conflicting on this topic and the ZKO projects P-reduce and IN-PLACE set out to determine the limiting factors for phytoplankton production. Using different approaches we clearly demonstrated that the phytoplankton is P-limited during the spring bloom, but diatoms show a short period of P-silicate co-limitation. The P-limitation affected the foodweb structure and decreased the dominance of diatoms.

COASTAL

Ballast water treatment: favouring the fast and the furious

To stop the further spreading of aquatic invasive species, ships' ballast water needs to be disinfected according to international standards that require the enumeration of viable microorganisms. NIOZ developed and maintains the facilities to test whether ballast water treatment systems are effective. For such a test, the microbial community composition in sea water was treated with hydrogen peroxide and compared to untreated water using a rigorous qualitative analysis based on molecular biology. Ballast water treatment did not affect the microbial community randomly, but completely wiped out certain groups of organisms and favoured the abundance of opportunistic, fast growing bacteria. Among these were members of the genera *Vibrio* and *Pseudoalteromonas* which are capable of producing antibiotic substances that prevent other bacteria from growing. As a result, the diversity of the microbial community was drastically reduced after ballast water treatment.

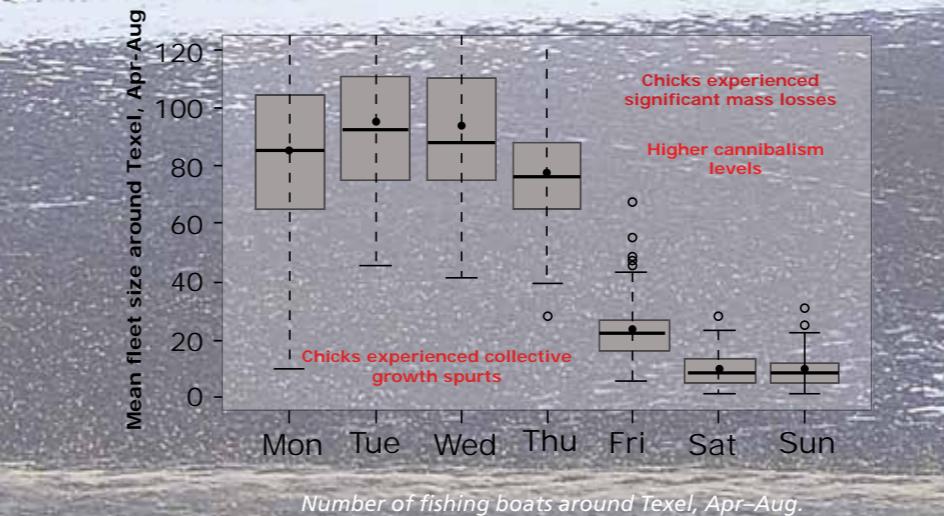

Judith van Bleijswijk, Biological Oceanography
judith.van.bleijswijk@nioz.nl

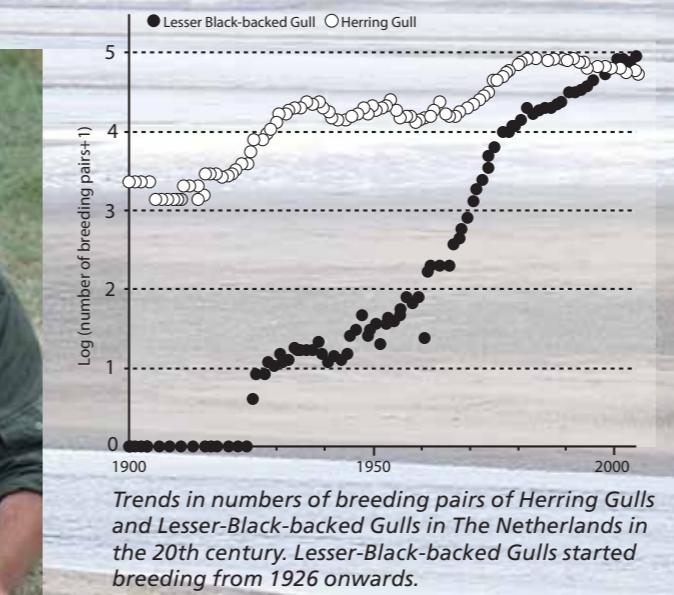

Bacteria in ballast water before treatment and 5 days after treatment with hydrogen peroxide: fast growing gammaproteobacteria benefit from treatment and become dominant.

Ballast water test facility in the NIOZ harbour.

A weekly cycle in cannibalism: killing the chicks on Sunday

Gull breeding populations reached unprecedented levels in the late 20th century. However, Herring Gull numbers declined after the peak in the 1980s and Lesser Black-backed Gulls declined after the peak in 2005. From a comparative study of their foraging ecology, demography, and population dynamics at Texel, it appeared that Herring Gulls were mostly affected by low annual survival rates in winter. Wintering survival was high in Lesser Black-backed Gulls, but the reproductive success was low as a result of high levels of cannibalism. GPS tracking studies suggested that commercial fisheries were of importance for these gulls, but that discards appeared to be the major food source as was clearly observed in the cyclic fluctuations in chick growth (spurts on weekdays, mass losses in weekends) and peaks in cannibalism in weekends. This pattern perfectly matches the weekly rhythm in fishing effort. The breeding populations of the two species are currently not flourishing, but both have profited from anthropogenic (unnatural) resources and population numbers were therefore unnaturally high.

Kees Camphuysen, Marine Ecology

COASTAL

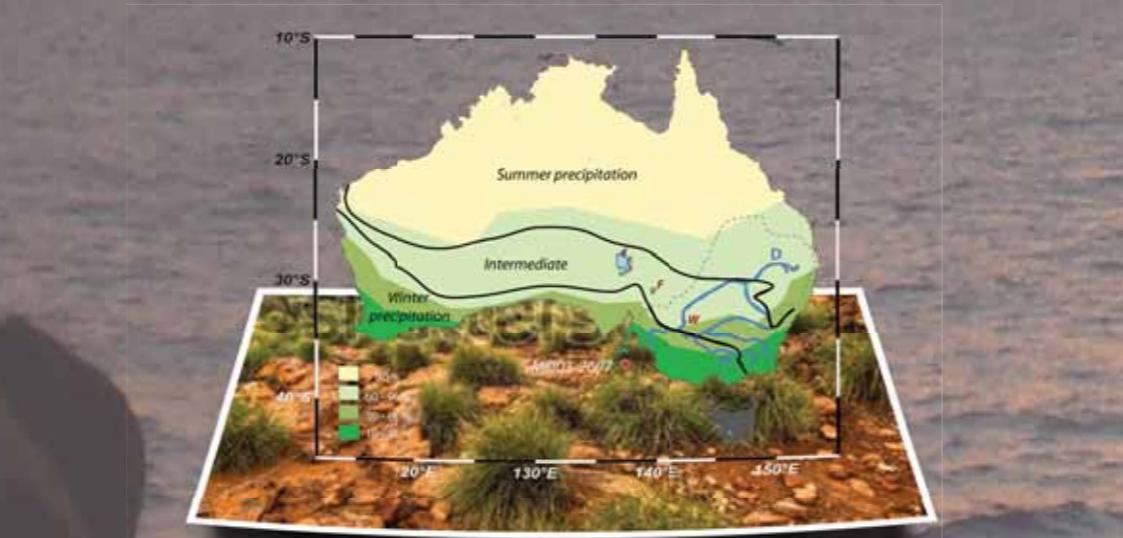

Intense crown fire in a Eucalyptus dominated wet sclerophyll forest, Kilmore area, Victoria, February 2nd, 2009.
© Richard Alder AFSM, National Aerial Firefighting Centre.

NIOZ researchers reconstructed past climate conditions as well as vegetation for South East Australia, home for a large part of the Australian fauna. This revealed an extensive period (68,000-31,000 years) of generally high C₄ (e.g. grasses) plant abundance that was punctuated by an abrupt increase in C₃ (e.g. trees) vegetation at ~43,000 years. This sharp increase directly followed the period in which the large animals in Australia became extinct. The cause for the vegetation change was not climate change as no evidence was found for any abrupt, strong changes in temperature or precipitation. Instead, the extinction of the megafauna allowed the expansion of C₃ vegetation such as shrubs and trees, which were normally consumed by these large animals. The researchers also found specific molecules which indicated that large parts of the vegetation were burned at this time. These fires were likely engendered by humans and aided by the fact that the C₃ vegetation is more prone to fire than C₄ vegetation.

Stefan Schouten, Marine Organic Biogeochemistry
stefan.schouten@nioz.nl

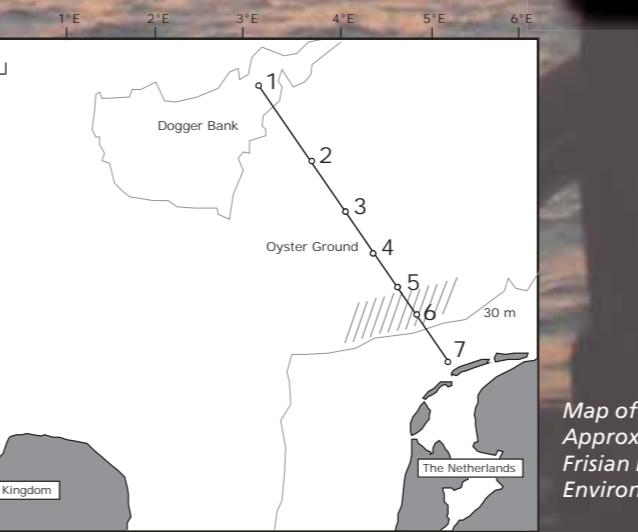

Extinction of Australian megafauna: vegetation change and forest fires

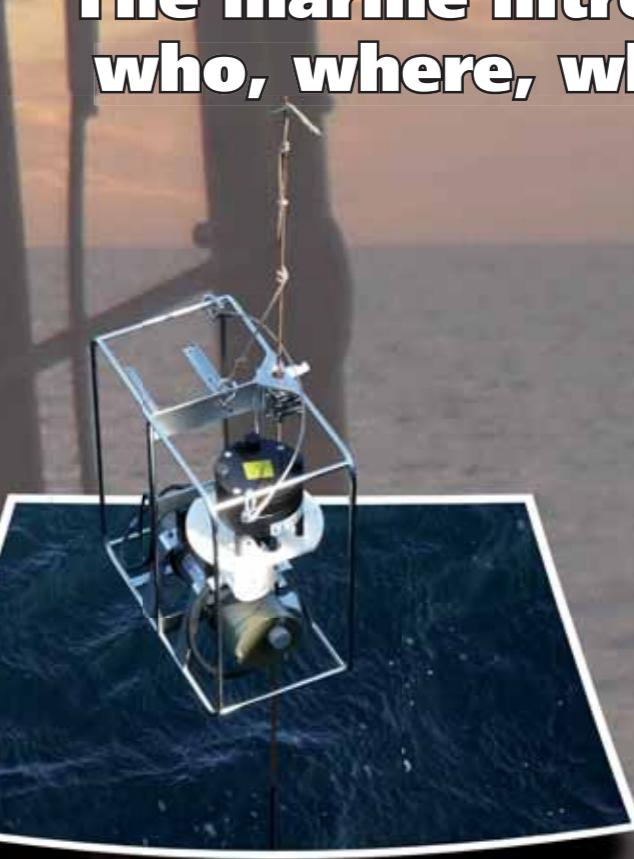

Map of Australia illustrating the modern distribution of C₄ grass relative to C₃ grass and seasonality of precipitation. The marine nitrogen cycle: who, where, when, why?

Nitrogen is an essential element for marine life. In the oceans and seas one form of nitrogen available to life is ammonia, which is used by phytoplankton but also by microbes such as the Thaumarchaeota which utilize ammonia as a source of energy. In this study we examined the importance of Thaumarchaeota in the North Sea. Thaumarchaeota were found in both the water as well as in the sediment floor. We found more Thaumarchaeota in the water in winter than in summer, but this was not the case in the sediment where Thaumarchaeota were most abundant in spring and summer. Their abundance in the surface waters was mainly dependent on the different water masses present in the southern North Sea. In the bottom waters the abundance of Thaumarchaeota was determined by particles or ammonia derived from the underlying sediment.

TROPICS

Oxygen concentration affects coral calcification

20

In a natural reef, corals have to cope with daily fluctuations of pH and oxygen (pH 7.8-8.7 and 27-241% O₂ saturation). The fluctuations are a result of the light/dark regime with higher pH and O₂ saturation values under light conditions. The effect of pH and oxygen fluctuations on the calcification rate of the reef-building coral *Acropora millepora* was investigated during a cooperative laboratory study between NIOZ and Wageningen UR. Under light conditions, calcification rates were enhanced three-fold solely by increasing pH. However, when the oxygen saturation was simultaneously increased, the pH effect was completely neutralized. Under dark conditions, pH had no effect on calcification, whereas low oxygen saturation resulted in significantly lower calcification rates. The results suggest that oxygen has a considerable control over *A. millepora* calcification, under both light and dark conditions. These results have implications for reef formation since the predicted higher water temperatures and coastal eutrophication are accompanied by a decrease in seawater oxygen saturation.

Catarina I. F. Silva, Biological Oceanography
catarina.silva@nioz.nl

Surviving in a marine desert

Ever since Darwin's early descriptions of tropical coral reefs, scientists have debated how one of the world's most productive and diverse ecosystems can thrive in the marine equivalent of a desert. It is an enigma how the flux of dissolved organic matter (DOM), the largest food source produced on reefs, is transferred to higher trophic levels. We discovered that sponges make DOM available to the reef fauna by rapidly expelling filter cells as waste which in turn is consumed by corals and other reef fauna. This "sponge loop" on the coral reef was confirmed in experiments, using DOM enriched in ¹³C- and ¹⁵N isotopes. The DOM-sponge-fauna pathway explains why biological hotspots such as coral reefs can survive in nutrient-poor tropical sea and hereby, provides an explanation for Darwin's reef paradox.

OPEN OCEAN

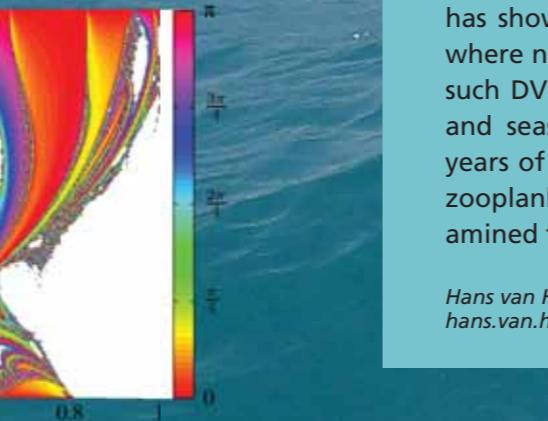

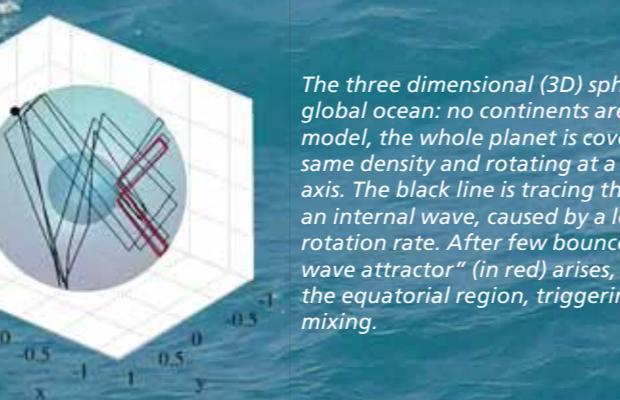

Internal waves and Equatorial dynamics

The equatorial ocean plays a fundamental role in our global climate system, as a connection between the two hemispheres and as the principal region of heat exchange between the oceans and the atmosphere. However, despite its importance, many aspects of the deep equatorial ocean still remain unexplained. One reason for this is the peculiar location of the low latitude belt: the equatorial ocean surface is actually aligned to the Earth's rotation axis, and thus common approximations, used to mathematically describe waves and currents in the mid-latitude ocean, break down. In this study, some intriguing aspects of geo-physical (and astro-physical) waves propagating in the interior of a water mass ("internal waves") have been explored in a fully enclosed basin, unveiling a mechanism of energy focusing that may be of relevance for the interpretation of equatorial features such as deep current jets or anomalous internal wave activity. Both can be very important for vertical mixing processes in the ocean.

Anna Rabitti, Physical Oceanography
anna.rabitti@nioz.nl

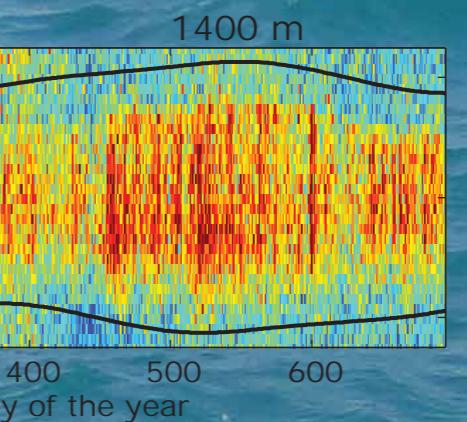

Jupiter and Earth comparison. Internal waves are a universal phenomenon in all kinds of density stratified and/or rotating fluids, from the ocean to the atmosphere, from fluid planets to stars to planet's cores. The mechanisms illustrated here possess the same level of universality, and might play a role in our laboratory tanks as well as in Jupiter inner dynamics. Fotocredits: NASA.

Here, many perturbations at a specific frequency are excited at the surface of the ocean (a storm?). This is done at different locations (horizontal axis) and in different initial directions (vertical axis). In white, energy is not focused on any specific location. In colours, energy gets eventually focused onto "internal wave attractors" and is distributed at different longitudes according to the colour scale on the right.

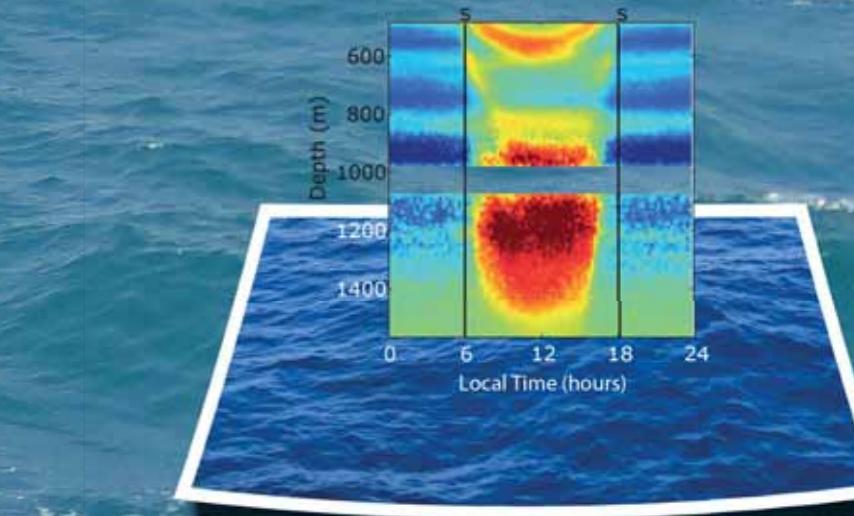

Daily vertical migration (DVM) is an ubiquitous phenomenon in marine plankton communities. Plankton migrate to surface waters at dusk and return to deeper waters at dawn. Up until recently, it was thought that DVM was triggered by a relative change in visible light intensity. However, evidence has shown that DVM also occurs in the deep sea where no sunlight penetrates. To identify whether such DVM is associated with north-south position and seasonal daylight variation, one and a half years of eight acoustic data records, a measure of zooplankton abundance and movement, were examined from the NE-Atlantic Ocean.

Hans van Haren, Physical Oceanography
hans.van.haren@nioz.nl

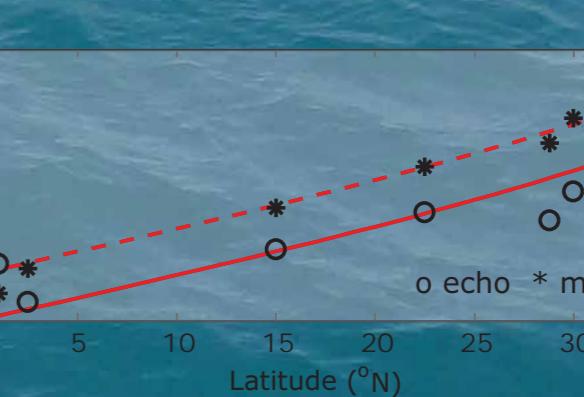

One-and-a-half years of daily acoustic variations. DVM follows day length variation with a change in season at all depths, here 1400 m, at 22.5°N. The black lines denote times of local sunrise and sunset.

Daily vertical migration in deep sea plankton is finely tuned to north-south position and day length

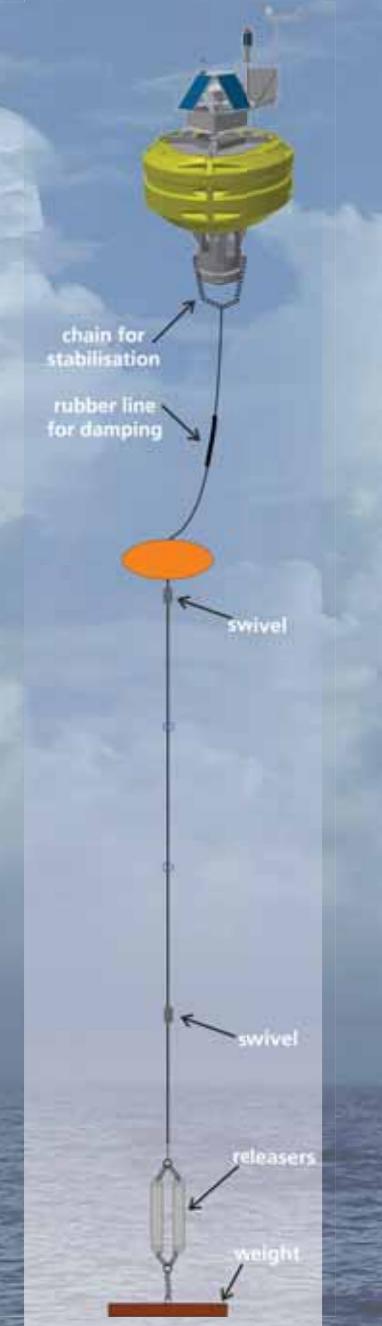

One-day composite of acoustic observations (red=high values), a measure of zooplankton abundance and movement. DVM followed the rhythm of local sunrise and sunset (s) precisely between 500 and 650 m (maximum sunlight penetration), but plankton shortened their time at depth by up to 63% at 1600 m. This suggests light was no longer a cue for DVM. This trend stayed consistent both across latitudes and between the different seasons. It is hypothesized that another mechanism, viz. a precise biochemical clock, maintains deep-sea plankton motions. In accordance with this hypothesis, the deepest plankton were consistently the first to migrate upwards.

DVM follows day length variation with a change in latitude at all depths, here ~1000 m where the average acoustics data residual is 77% (9.3 hours) of the sun's day length. The full red line indicates the theoretical sun's variation in day length.

OPEN OCEAN

Blowing in the wind ...

Every year about 200 million tons of Saharan dust blow over the Atlantic Ocean. Together with dust derived from other arid regions in the world, it has the potential to modify global climate by influencing the radiative balance of the atmosphere as well as by supplying iron and other essential limiting micronutrients to phytoplankton in the ocean. As part of a multidisciplinary effort to improve our understanding of the links between desert dust and ocean productivity and climate, three autonomous dust-collecting buoys were engineered by the NIOZ-MTEC department. These have been deployed along the path of the northern trade winds across the Atlantic. The buoys are equipped with meteo sensors to check weather- and sea state, and with a dust collecting device to take samples of atmospheric dust at regular time intervals, in sync with submarine sediment traps that sample dust settling through the water column to the ocean floor. Updates of the buoys' positions and performances are transmitted via satellite links to land twice a day, whilst the sampling time and duration can be manipulated from home via return signal. These buoys are unique in the world and they provide exclusive samples and data that are of vital importance for many scientific disciplines including geology, meteorology, remote sensing, climatology, and biology.

Marine Geology and Chemical Oceanography
jan-berend.stuut@nioz.nl

Reconstruction of salt content from algal lipids

Sea water in the oceans contains about 3.5% salt with higher concentrations in the tropics and lower concentrations in the polar regions. These differences in salt concentration form an important driver of the water mass circulation in the present day ocean and therefore of our climate. Salt concentrations have likely varied in the (geological) past, but at this moment we lack the tools to test this hypothesis. Currently, at NIOZ we are developing such a tool based on lipid molecules of so-called haptophyte algae. These lipid molecules contain many hydrogen atoms and only a small amount of these is in a 'heavy' form, as deuterium. Culture experiments showed that the amount of 'heavy' hydrogen in the algal molecules is depending on the salt concentration of the water in which the algae grow. In water with high salinity the molecules contain more 'heavy' hydrogen than in water with low salinity. Since the molecules are found in ancient marine sediments that are up to 55 million years old, analysis of their 'heavy' hydrogen content opens the possibility to reconstruct salt concentrations of ancient sea water.

POLAR

Melosira arctica filaments at the underside of multiyear sea ice.

Strands of Melosira arctica recovered from the Arctic deep sea floor. © Science.

In situ measurements of oxygen concentration in Arctic deep sea floor show decrease in oxygen at places with ice-algal deposits (profile 3) compared to places without algal deposits (profile 4).

Rapid shift in Arctic ecosystem due to global warming

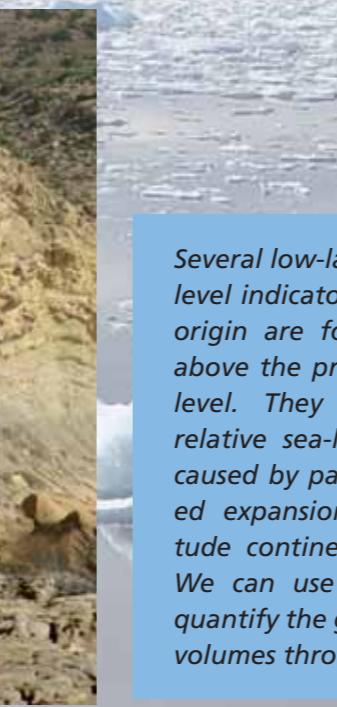

In the summer of 2012, NIOZ scientists joined an international expedition to the Arctic sea with the German ship Polarstern. Previous investigations of the underside thick multiyear-sea-ice found that the diatom *Melisira arctica* grows meter-long filaments. Extreme melting of Arctic sea ice due to general global warming has led to the observed major loss of the thick multiyear sea ice. This melting resulted in subsequent massive sinking of these algae filaments to the seafloor. Decomposition of the dead algae by bacteria rapidly consumed most of the oxygen in a large area on the sea floor. The preceding consensus was that it would take a considerable amount of time before changes in the climate would affect the conditions on the seafloor. However, the expedition scientists observed that the ecosystem of the Arctic Sea, both at the sea surface by loss of sea-ice and on the deep sea floor is rapidly affected by increasing temperatures. These findings were reported in Science (Boetius et al., Science 339, 1430; 2013)

Karel Bakker, Marine Geology and Chemical Oceanography
karel.bakker@nioz.nl

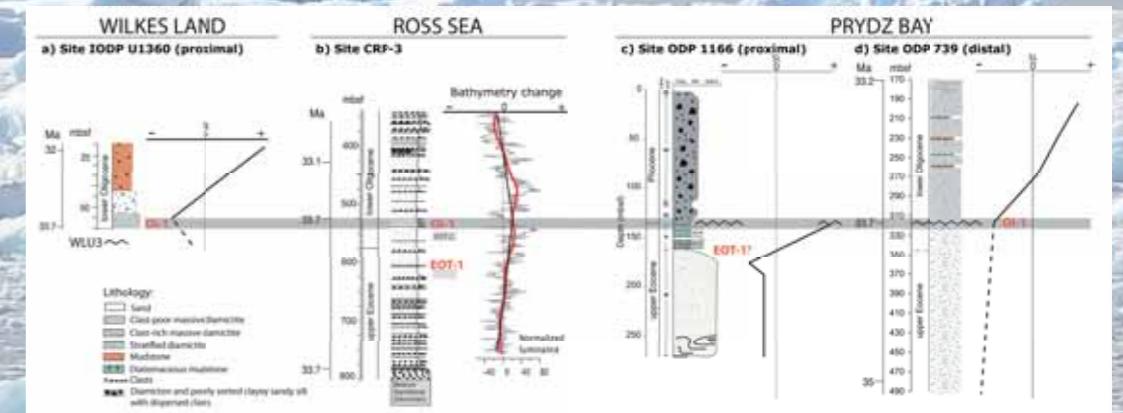

Scientists investigate physics and biology of, in and under the sea ice on an expedition with RV Polarstern in the high Arctic during the sea ice minimum in summer 2012.

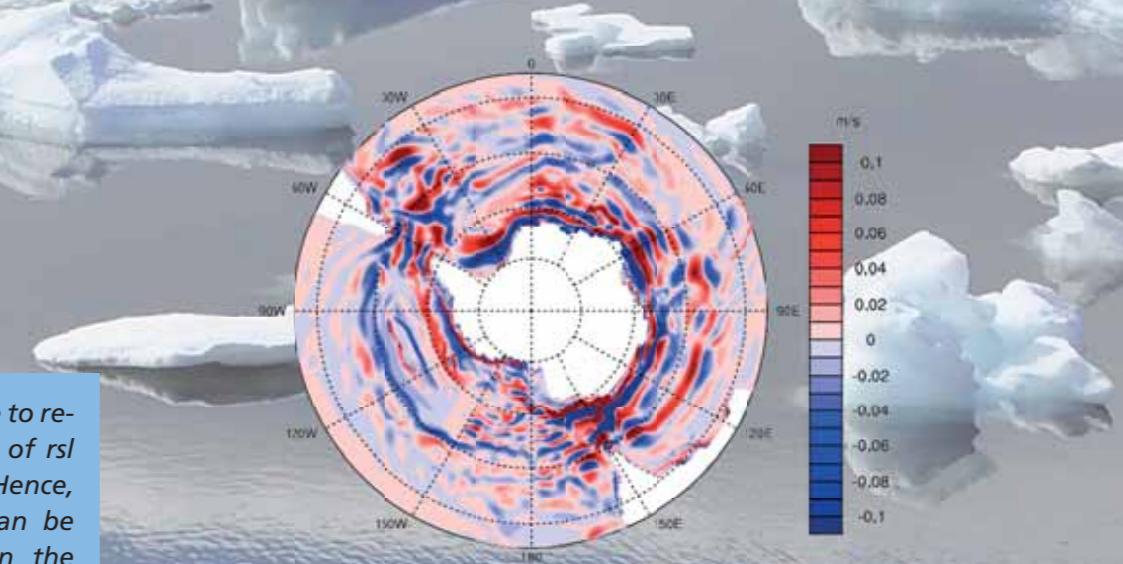

Understanding the past sea-level changes

Several low-latitude sea-level indicators of geological origin are found nowadays above the present mean sea level. They witness major relative sea-level (rsl) drops caused by past climate-related expansions of high-latitude continental ice sheets. We can use these data to quantify the global ice sheets volumes through time.

Conversely to the low-latitude far-field rsl sites, sediments cores from the inner continental shelf of East Antarctica witness a large rsl rise during the first Antarctic glaciation (~34 million years ago). The observed deepening stems from the combination of crustal subsidence under the load of the ice sheet and from the gravitational attraction exerted by the growing Antarctic ice sheet on the ocean water.

Bathymetric variations induced by the first Antarctic glaciation significantly affected the ocean circulation in the Southern Ocean. The ocean flow variations alone likely impacted local nutrient variability, erosion and sedimentation rates and also ocean heat transport.

INTERVIEWS

Cascading effects of losing predators around the globe

Jan van Gils

"Being a true globetrotter, the Red Knot may be a very good indicator species for the global biodiversity crisis". Jan van Gils talks passionately about the shorebird species *Calidris canutus canutus* that connects the Arctic tundra via the tidal flats of the Wadden Sea with the tropical mudflats of West-Africa. With a VIDI research grant van Gils tries to understand the role of this shellfish-eating bird for benthic communities in the Dutch Wadden Sea and the Banc d' Arguin in Mauritania, West-Africa.

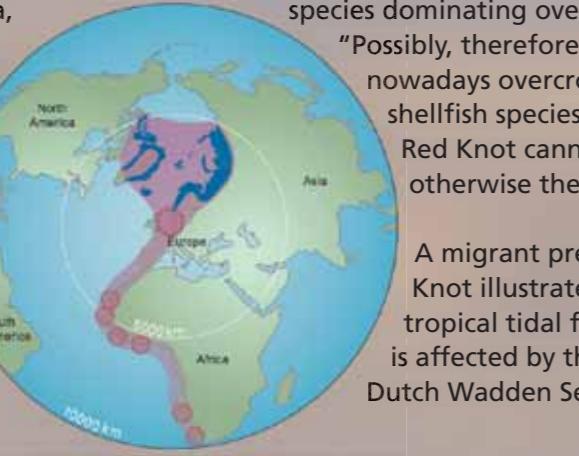

"Our research within the Department of Marine Ecology has societal relevance", emphasizes van Gils. He worries about the drastic biodiversity decline caused by mankind. "For example, fishing activities (notably shellfish) in the Dutch Wadden Sea have greatly diminished the

food supply for shorebirds in the past", he says. "Currently there are additional threats of gas- and salt-extraction".

Most likely these fishery activities in the Dutch Wadden Sea have led to a smaller population of Red Knots in Africa. That led to a reduced predation pressure on African shellfish. As a result the total number of shellfish increased, but with a few species dominating over the rest. Van Gils:

"Possibly, therefore Banc d' Arguin is nowadays overcrowded with a toxic shellfish species. A species that a Red Knot cannot eat too much of, otherwise the bird gets diarrhea".

A migrant predator like the Red Knot illustrates how a pristine tropical tidal flat area in Africa is affected by the situation in the Dutch Wadden Sea. "The steering

Valuable expeditions in the North-Atlantic Ocean

Laura de Steur

"It takes a long time, it's expensive and it requires a lot of coordination". Laura de Steur outlines in one sentence three important features of her research on ocean currents in the sub-polar North Atlantic. "I want to know more precisely about the processes that determine these currents, their relation with atmospheric forcing and their role in Earth's climate", she says.

Within the Physical Oceanography department, de Steur focuses on different aspects involved in the large-scale ocean currents of the Arctic and North Atlantic. "For example, I investigate variations in density due to temperature and salinity changes or variability due to atmospheric forcing such as winds", de Steur says.

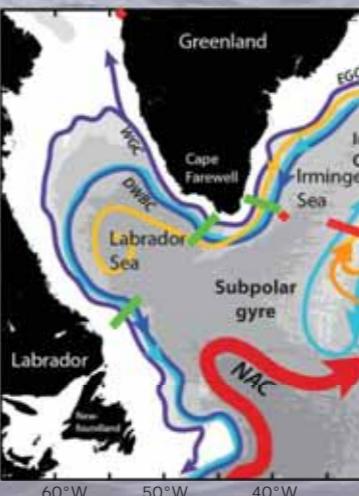

"My present research focuses on the cold and fresh Arctic current southwards and a northward branch of warm Atlantic water. I want to unravel the physical properties of both currents that are indicated with blue and yellow lines on the map".

But how to measure ocean currents? With hand gestures de Steur explains the characteristics of a mooring, an anchored installation rising upwards from the ocean floor. A

long steel cable is kept upright by a buoy and is anchored to the bottom by a heavy weight. Instruments placed at different depths on the cable measure temperature, salinity and current velocities. "That's how we obtain continuous physical measurements in the ocean", explains de Steur.

These measurements are time-consuming and expensive since her research is aimed at the long-term. De Steur explains that the moorings are often left in place for one to five years or even more. "But we have to go back each year to get the data from the instruments and service the

moorings". That involves a research vessel, like our NIOZ flagship RV Pelagia, and technical staff from the NIOZ. Costly research, therefore de Steur has to be patient before the first data become available for analysis.

These data are processed and analyzed at the NIOZ. "That is extremely important", says de Steur. "You first have to know the fundamental part of the story before you can think of application in future ocean or climate scenarios". Integration of data obtained at other European institutes that, like the research of de Steur, are part of NACLIM (North Atlantic CLIMATE Program) is done to obtain the "big picture". Ultimately these results are also used to validate and improve climate models. "Sea going expeditions are so expensive that cooperation with other research institutes is an absolute necessity" ends de Steur. A new research project OSNAP (Overturning in the Subpolar North Atlantic Program), with American, German, British and Canadian colleagues, starts in 2014 and will further strengthen the global partnerships of research institutes to which the NIOZ belongs.

INTERVIEWS

Lipids and DNA to learn more from wonderful microorganisms

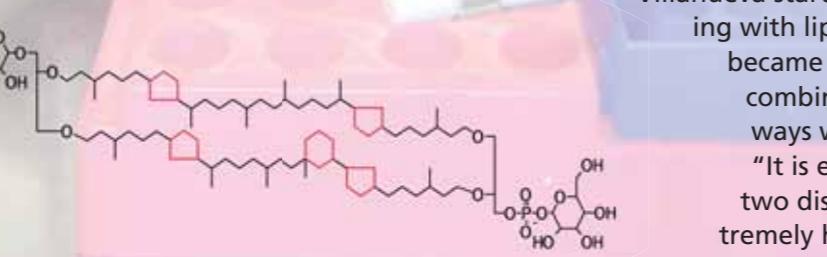

'Thaumas' means wonder in Greek. Studying Thaumarchaeota, microorganisms that live in the oceans, must therefore be exciting research. Analysis of the organic components of Thaumarchaeota and other small organisms can provide insights into past climates. "We collect water column samples and sediment, searching for lipids which we use to track the presence of Thaumarchaeota in both the present and the past", says Laura Villanueva, scientist at the department of Marine Organic Biogeochemistry (BGC).

Thaumarchaeota have some very specific lipids, the main component of their membranes, that are not found in any other organism in the ocean. The BGC department developed a paleothermometer called TetraEther indeX of lipids with 86 carbons (TEX_{86}) that is used to reconstruct past sea surface temperatures. "Thaumarchaeota living in warmer temperatures adapt their membrane by increasing the number of rings in their lipids, which is reflected in the TEX_{86} value. TEX_{86} values can thus be translated into the temperature at which past Thaumarchaeota were living. In order to understand

how these microorganisms behaved in the past and which environmental factors affected them, we also need to study them in present oceans", says Villanueva.

Futhermore, Thaumarchaeota are a key component of the carbon and nitrogen cycle in the marine environment. They oxidize ammonia into nitrite and they use bicarbonate as a carbon source. Villanueva: "Once we know how abundant and active Thaumarchaeota are under certain conditions, we are then able to predict their role in the marine carbon and nitrogen cycles". That is important information because life

Villanueva started her scientific career working with lipids. After her graduation she became involved in genetics. Now she combines both paths. "I do what I always wanted to do", says Villanueva. "It is exciting to fill the gap between two disciplines. Together with the extremely helpful people working at the NIOZ I'm always learning new things".

Laura Villanueva

The ocean in 5 millimeters of sand

A green patina on the beach. Only a few millimeters thick. Microbiologist Henk Bolhuis describes the first impression of a microbial mat. "Despite its plane appearance, a microbial mat is like a tiny model of the ocean", he says. "The whole vertical stratification of the ocean is hidden in its minute layers". Bolhuis is a senior scientist at the Department of Marine Microbiology in Yerseke where he investigates the diversity of microorganisms and their role in the structure and function of marine coastal ecosystems.

Bolhuis talks contagiously about cyanobacteria, the primary producers and conductors of a microbial mat. "Just like us, they also have a biological clock that determines

their day-night rhythm. Cyanobacteria are phototrophic organisms that produce oxygen, sugars and nitrogen containing compounds. Other microorganisms depend on these products and in that way an unprecedented microbial diversity is supported in only a few millimeters".

Henk Bolhuis

The dynamics of sand and water, light and dark, oxic and anoxic, fresh and salt water make the microbial mats an ideal model system for studying ecological issues. "Many oceanic processes, such as the sulfur and carbon cycle, are represented in a microbial mat", says Bolhuis. "Using a multidisciplinary systems biology approach, we can study and model all facets of these mats, ranging from spatial patterns, geochemical processes, species interactions and of course evolutionary processes related to diversity and adaptation".

In Yerseke, Bolhuis and his colleagues maintain a unique culture collection of cyanobacteria and unicellular algae. With the Culture Collection

Yerseke (CCY), NIOZ facilitates researchers all over the world.

department we combine fieldwork with state-of-the-art molecular techniques. My goal is to develop a large artificial microbial mat in the laboratory where researchers from all over the world can collaborate to study all facets of the system".

Bolhuis explains the societal importance of his work in terms of natural coastal defense. "We can create a starter culture to add to the bare sand and initiate the development of a microbial mat".

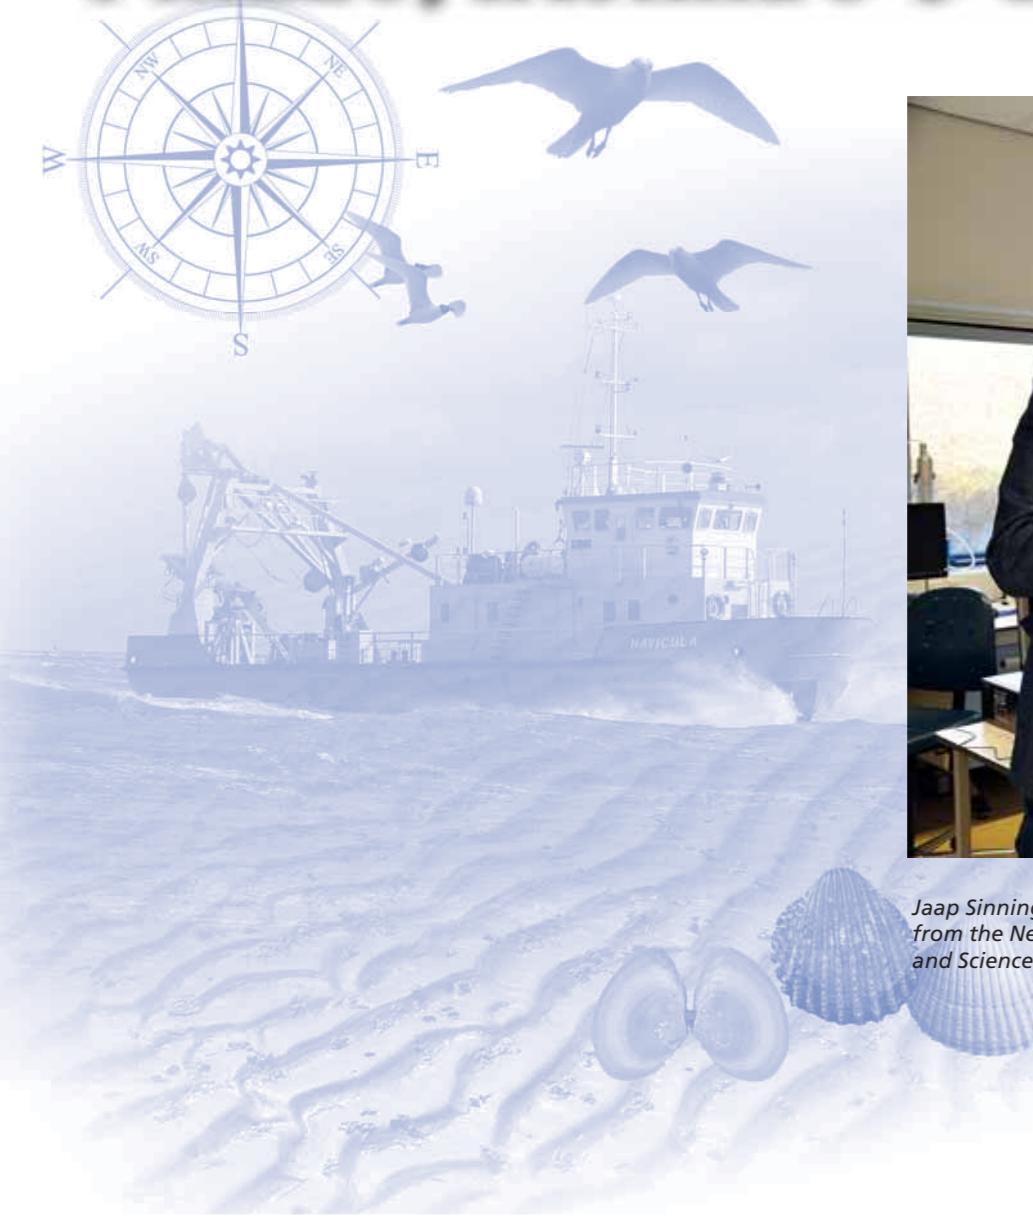

"For example at the North Sea coast of Schiermonnikoog", he emphasizes. "There microbial mats turned the beach into a unique salt marsh. An important process given the expected sea level rise". In the photo Bolhuis presents a bottle of extreme halophiles, another passion of his. The only square microorganisms that exist. "I was the first to isolate them and sequence the genome", he proudly says.

The interaction with people, the different nationalities and working at the frontiers of knowledge are all important personal motivations for Bolhuis, which allow him to work each day with passion and enthusiasm. Bolhuis: "Within our

OUTREACH

PRIZES, AWARDS & GRANTS

Jaap Sininghe Damsté, Stefan Schouten en Laura Villanueva won the NWO/OCW 'Zwaartekracht' grants from the Netherlands Organisation for Scientific Research (NWO) and the Ministry of Education, Culture and Science (OCW)

The research team including Kees Camphuijsen won the Academic Year Price 2013 for their research into the behaviour of birds and their response to their environment.

Stefan Schouten won an ERC grant for his research on long chain diols as novel organic proxies for paleoclimate reconstructions.

SUSTAINABILITY

36

As the NIOZ mission is to gain and communicate scientific knowledge on seas and oceans for the understanding and sustainability of our planet, the NIOZ respects the environment and is working in a sustainable way. On the one hand the NIOZ is striving to optimize its daily working processes and to deploy the most sustainable solutions. On the other hand sustainable management of resources and dealing responsibly with our environment, and the seas, oceans and coastal zones in particular, is the scope of a substantial part of our research.

Tangible steps which have been made in 2013 include:

- Composition of a Procedure Invasive Species and the arrangement of a special climate room with facilities for experiments with potential invasive species to reduce risks of coincidentally releasing potential invasive species.
- Introduction of the NIOZ instruction movie 'In the workplace' with instructions how to operate in a sustainable and safe way at the NIOZ and in the laboratories in particular.
- A Risk Inventory Evaluation was held in 2013 and it was concluded that the personnel is well-educated to work with potentially environmentally hazardous substances. Another finding is that there is still room for indoor climate control optimization to counter unnecessary energy use. As a result the indoor climate control will be computed and adjusted in 2014.

Examples of research projects with important sustainability aspects for 2013 are:

- The involvement of the NIOZ in 'Building with Nature' projects in The Netherlands and around the world. For example the research on the optimization of the recolonization perspectives for sand excavation sites in the North Sea. Several other projects involve research on natural coastal defense using sand motors, sand suppletions and oyster reefs, but also the sustainable removal of problematic exotic oyster reefs at recreational sites. Research on 'natural' sedimentation and erosion processes in amongst others the Wadden Sea and the Eastern Scheld are of importance to maintain and restore intertidal flats with rich benthic communities (as well as shallow subtidal and undisturbed supratidal areas) important as feeding and breeding grounds for birds and fish. This is of increasing importance with the expected sea level rise in the 21st century. Other research on ecosystem restoration includes seagrass and marsh vegetation restoration and in the tropics mangrove forests and coral reef restoration. These are all of importance for the reduction of energy of waves reaching shorelines. Besides restoration one can think of sustainable exploitation of marine resources and minimization of impacts, amongst others investigated in relation to deep sea mining, to fisheries and the effectiveness of the closure of areas for certain activities.
- Several NIOZ projects involve European networking and adjustment initiatives, with the aim that common strategies will lead to progress in the adaptation of sustainable marine policy and management. Examples are the leading role of the NIOZ in the installation of a pan-European Marine Biodiversity Observatory System and a role of the NIOZ in the optimization of present and potential sensors for Coastal Observation. Other relevant projects towards sustainable European management comprise the development of innovative tools and indicators for quality assessments and management evaluations.
- In 2013 the NIOZ seaweed centre has been built on Texel, which will be officially opened in 2014. The centre aims to investigate the potentials of sustainable production of seaweed biomass for food, energy and pharmacy in the coastal systems in the future. Electricity for the centre is generated by solar panels, wastewater is treated using a seaweed biofilter, and seaweed incubation tanks are heated/cooled using an earth heat-cold system. In relation to microalgae the NIOZ runs a demonstration project in Yerseke for an integrated and sustainable enclosed raceway and photobioreactor for algal cultivation and biodiesel production.
- The NIOZ has signed the Chain agreement Plastics Recycling in November 2013. The agreement aims at the prevention of plastic wastes in the environment including worlds' oceans. Innovative cooperation should close the plastic cycle to prevent consequences of amongst others marine litter on flora and fauna, shipping, fisheries and food - and water quality.
- The NIOZ research on ballast water treatment installations helps manufacturers to design and build better installations to prevent exotic and potentially invasive species introductions and exchange. As one of the laboratories carrying out land-based tests for ballast water treatment systems, NIOZ plays an important role in tests for type approval of these instruments. The development of small hand-held test instruments will allow port authorities to check the performance of treatment systems on board of ships within the hour.

This is just a small sampling of our research initiatives in 2013 directly related to sustainability issues. Screening our projects will show that sustainability is in our genes.

37

FACTS & FIGURES

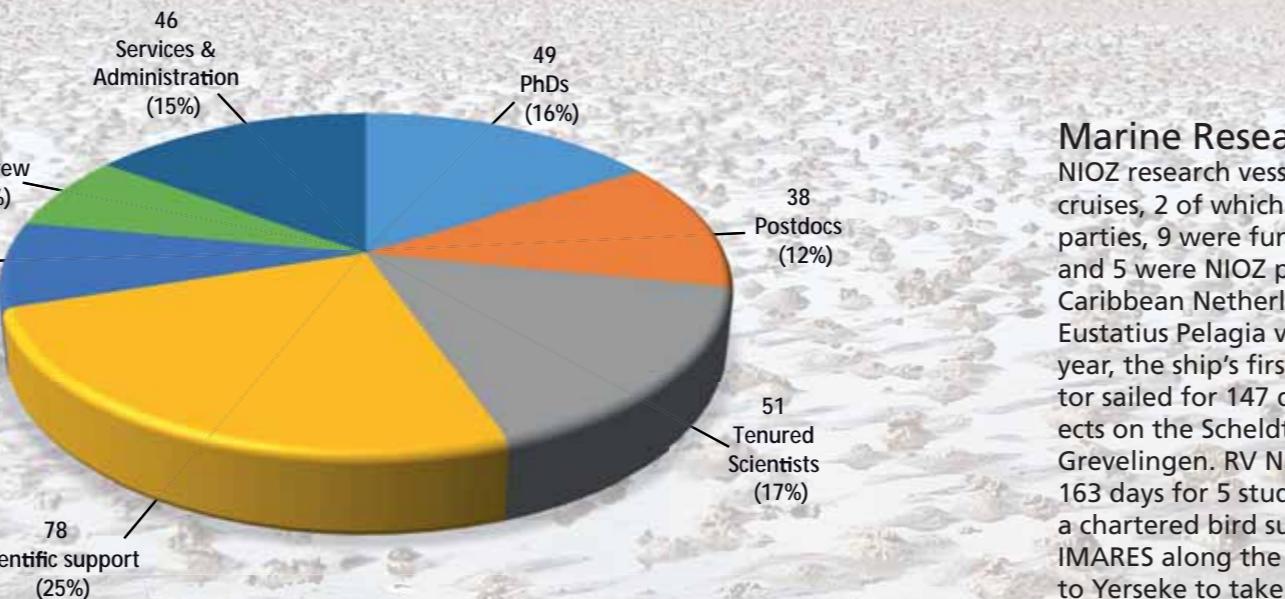

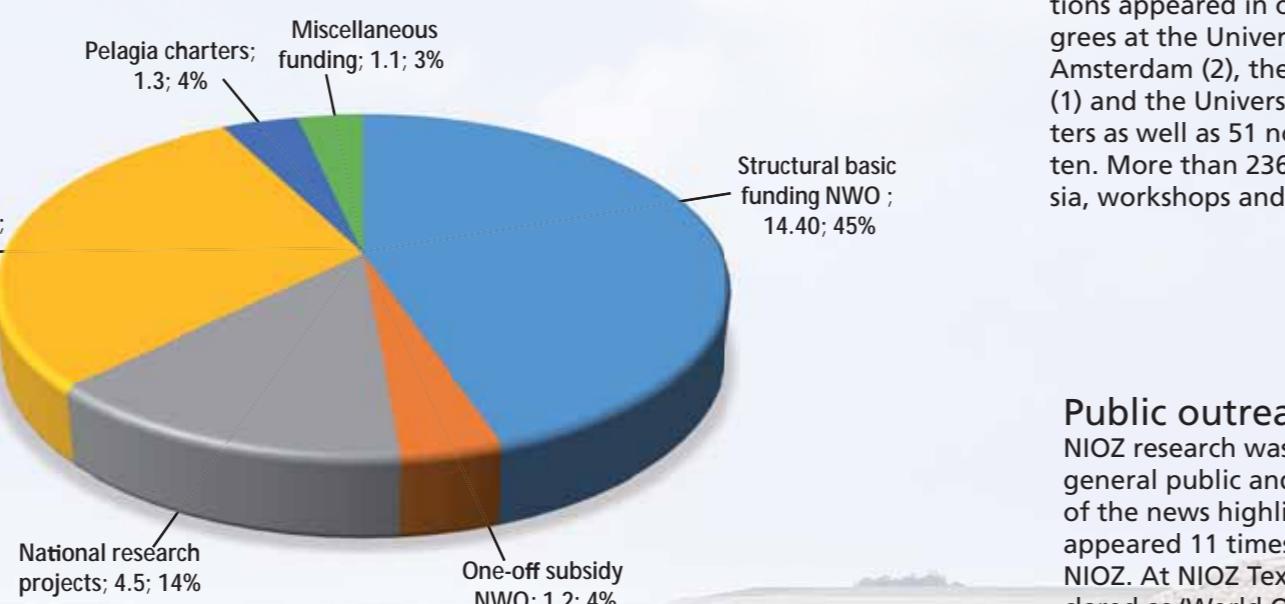

Budget

The overall budget for 2013 amounted to 32.1 M€. NWO contributed 14.4 M€ (equivalent to 45% of the total budget) as basic structural funding and 1.2 M€ (4%) as a one-off subsidy. Project related additional funding was received through national (4.5 M€; 14%) and international (9.6 M€; 30%) projects acquired in competition. Chartering of RV Pelagia to third parties yielded a net revenue of 1.3 M€ (4%). Miscellaneous and ad hoc funding amounted to 1.1 M€ (3%).

In 2013, spending surpassed income, resulting in a net loss. The development of a strategy to close this gap has the highest priority for the management and the board in 2014. A more detailed budget overview is presented online at www.nioz.nl/annual-report-2013.

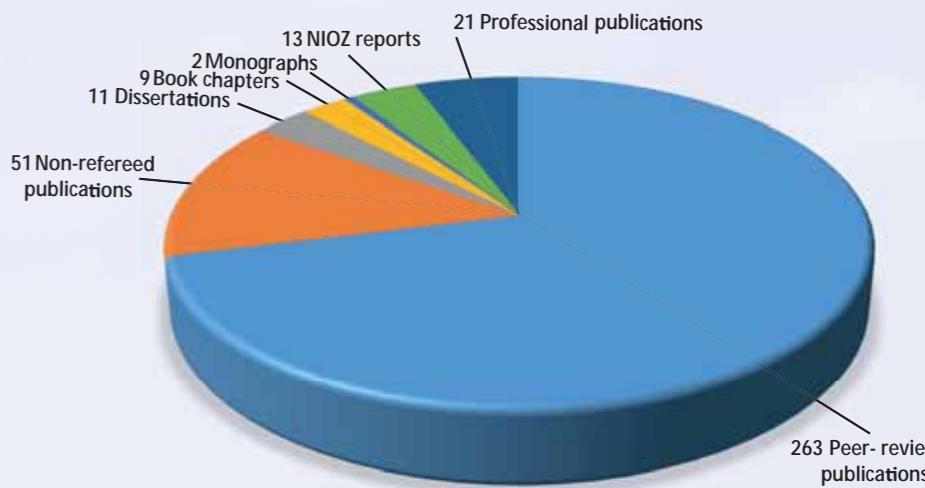

Staff

On 31 December 2013, NIOZ employed a staff of 309 FTE's, equivalent to 344 employees. Of these, 79 employees were of foreign nationality, representing 19 countries. The numbers and relative distribution (in %) of personnel over the different staff categories remained fairly constant. In comparison to the end of 2012, total staff decreased by 9.5 FTE's. Scientific staff, including tenured senior scientists, postdocs and PhD students accounted for 45% of the total staff, scientific support staff 25%, and technical staff, ship crew, and services & administration accounted for 30%.

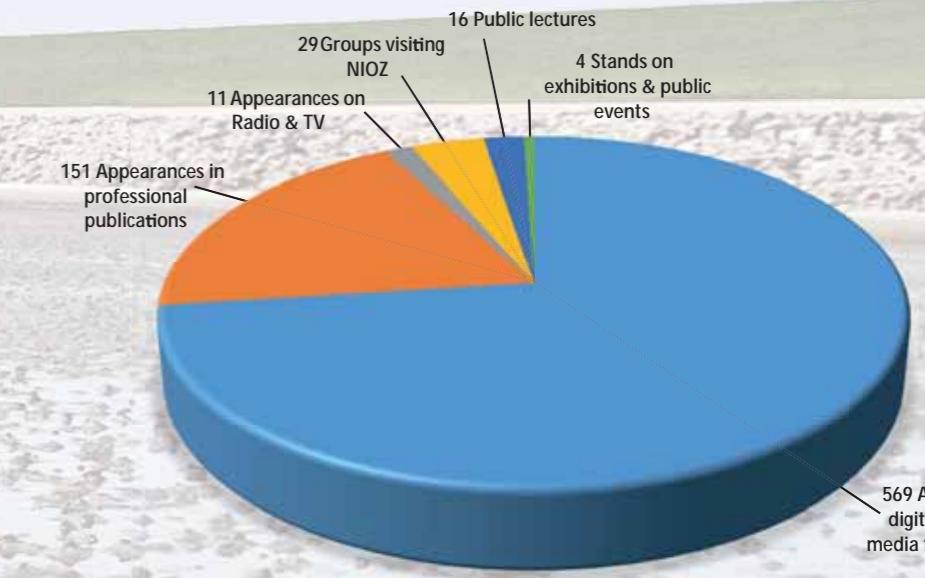

Scientific output

NIOZ scientists authored 263 peer-reviewed publications, of which 59 publications appeared in open access journals. Eleven PhD students received their degrees at the University of Groningen (4), Utrecht University (2), Vrije Universiteit Amsterdam (2), the Radboud University Nijmegen (1), the University of Bremen (1) and the University of Las Palmas (1). Moreover, 2 monographs, 9 book chapters as well as 51 non-refereed publications and 13 NIOZ reports have been written. More than 236 oral presentations and 88 posters were presented at symposia, workshops and the weekly NIOZ colloquium series covered 50 lectures.

Public outreach

NIOZ research was discussed 569 times in digital and printed media for the general public and 151 times in media with a professional readership. Many of the news highlights are presented in this annual report. NIOZ scientists appeared 11 times on Radio and TV and gave 16 public lectures outside NIOZ. At NIOZ Texel, a lecture series was organized on 8 June, being declared as 'World Oceans Day' by the United Nations. NIOZ had a stand on 4 exhibitions.

Marine Research Facilities (MRF)

NIOZ research vessel Pelagia sailed for 280 days in 16 cruises, 2 of which were charter cruises funded by third parties, 9 were funded by NWO-ALW or EU/ESF/ERC, and 5 were NIOZ projects. In support of the start of the Caribbean Netherlands Science Institute (CNSI) on St. Eustatius Pelagia visited the island at the end of the year, the ship's first-ever visit to the Caribbean. RV Luctor sailed for 147 days in 8 research and charter projects on the Scheldt estuary, Eastern Scheldt and Lake Grevelingen. RV Navicula sailed in the Wadden Sea for 163 days for 5 student courses, 20 research cruises and a chartered bird survey for marine research institute IMARES along the Dutch coast. In May, Navicula went to Yerseke to take over the normal Luctor programme while Luctor was carrying out a charter cruise for IMARES.

Symposia

NCK Theme Day Remote Sensing of the Coastal Zone, 25 January, Utrecht. Organised by D. van der Wal and C. van Oeveren, chaired by D. van der Wal.

3rd EOS Topical Meeting on Blue Photonics® - Optics in the Sea (Blue Photonics 3), Wernand, M.R. (general chair), 18-20 March, Royal Netherlands Institute for Sea Research (NIOZ), Texel, Netherlands. Number of attendees: around 70 scientists, mostly European and some from India. The conference provided a major international forum for the discussion of marine optics and its applications. Recent progress in the field were reviewed, the formation of a community of scientists and engineers working in related areas was promoted and the interdisciplinary collaboration required to meet the rapidly developing challenges of the future has been stimulated. Conference Topics: Environmental Monitoring, Crowdsourcing Topic related Smartphone/iPhone Apps, Ocean Colour, Radiative Transfer and Modelling, Marine Bio-optics and Remote Sensing, Fluorometry, AOP/IOP, 2D and 3D Underwater Imaging and Innovative Sub-sea Optical Techniques and Instrumentation. The Theme Day provided an overview of the state of the art of remote sensing of the coastal zone in the Netherlands. The presentations covered morphological, ecological and water quality aspects, using satellite, airborne and near-surface (imaging) remote sensing. The Theme Day served to raise awareness of the value of remote sensing capabilities both for scientific research and coastal management, and to identify opportunities for observing and monitoring the (Dutch) coast using remote sensing.

Third International DEB Symposium, J. van der Meer, chairmen of the organization committee, 24-26 April, 90 participants.

The aim of Dynamic Energy Budget (DEB) theory is to quantify metabolism that all individual organisms share on the basis of simple physico-chemical principles and to understand possible deviations in terms of mechanisms in an evolutionary context. This aim strongly invites for a formalised modular set-up of the models. The inclusion of metabolic memory (via reserves), the full-life cycle of individuals (embryo, juvenile, adult) and the explicit

use of conservation laws sets the theory apart from other approaches. DEB research invested a lot of effort during the last years in the further development of parameter estimation methods (and software), testing them on the rapidly growing collection of animal species. These tests and the comparisons among species that came into reach formed the major topic during the symposium.

'Ballast water management, from concept to reality', Europort Maritime Exhibition, Rotterdam, the Netherlands, 6-7 November, organized by ProSea and NIOZ. Chairs: J.P. Boon (NIOZ) and E. Bogaard (ProSea).

This symposium was organized at the Europort maritime exhibition to inform a maritime oriented audience about the most recent developments about the implementation of the IMO Ballast Water Management Convention and the regulations in the USA (Final Rule of the US Coast Guard and the Vessel General Permit of the USEPA). The NSBWO Work package leaders presented highlights in research, policy and on board operation and sampling. Especially the café meetings where the audience could ask their questions directly to the experts in the different fields were highly successful and very much appreciated. 126 unique visitors attended at least one of both days.

'Sequential carrying capacities of tidal flats along the East-Atlantic Flyway', T. Piersma, chairmen of the symposium, 14 November, NIOZ-Texel.

In this symposium we explore the role of the Banc d'Arguin and other coastal systems in the life cycles of migratory birds. We approach this question from both mechanistic and demographic perspectives, after a general introduction to the theme of seasonal connectedness by Norris.

Speakers: Theunis Piersma (Professor Global Flyway Ecology at University of Groningen and senior scientist NIOZ), Ryan Norris (Professor at University of Guelph, Canada), Tamar Lok (University of Groningen, PhD), Matthijs van der Geest (NIOZ, PhD), Mohamed El-Hacen (University of Groningen, PhD). Convenors: Theunis Piersma, Tamar Lok, Matthijs van der Geest.

ANT/NCK themadag Oosterschelde, Topshuis Neeltje Jans, organized by T. Ysebaert and P. Herman, 11 December.

Courses

(Bi-)Annual/regular courses:

Annual MSc course - "Global Change and Coastal Hazard Mitigation" (together with S. Temmerman) at the Antwerpen University, Bouma T.J.

Bi-annual course at NCK summer school, Texel, July, Bouma T.J.

Course "How to give a good talk" NIOZ, Yerseke, 23 January. Contact person dr L. Villanueva.

Course "How to write a scientific paper" Contact person dr S. Schouten.

Course "Proposal writing" NIOZ, October 11 Contact persons dr. L. Villanueva, dr. M vd Meer, dr. S Schouten.

E-M. Zetsche organized a 2-day image analysis course held by BioVoxcel on 'Scientific Image Processing and Analysis'. 29-30 October 2013. 16 persons in total from NIOZ-Yerseke and NIOZ-Texel participated.

F. Montserrat. Double lecture "Estuarine Ecosystem Engineering" and "Geo-engineering" at Roosevelt Academy Middelburg, 7 March.

F.J.R. Meysman WE-DBIO-14373 Environmental modeling (4 ECTS), 1ste MSc Oceans & Lakes, joint master Vrije Universiteit Brussel - Universiteit Gent – Universiteit Antwerpen (co-titularis with K. Soetaert)

F.J.R. Meysman WE-DBIO-14389 Applied Mathematics and Statistics (6 ECTS), MSc Oceans & Lakes, joint master Vrije Universiteit Brussel - Universiteit Gent – Universiteit Antwerpen (co-titularis with M. Elskens)

F.J.R. Meysman WE-DSCH-14655 Modelling of the environment (6 ECTS), MSc Chemistry, joint master Vrije Universiteit Brussel - Universiteit Gent (titularis)

K Soetaert. Environmental modeling (4 ECTS), MSc Oceans & Lakes, Universiteit Ghent.

Lipsewers, Y., Bale, N., Hopmans, E.C., Schouten, S., Sinninghe Damsté, J.S., Villanueva, L. A combined DNA/RNA and lipid approach Example: Aerobic ammonia oxidizers in the oxygen transition zone of coastal marine sediments. NIOZ Marine Masters Course 'Exploring the Wadden Sea', July.

Marine Master Course 2013 "Exploring the Wadden Sea". Contact person dr. H. Stigter. Lectures, field work and data analysis on Wadden Sea ecosystem. Participants: 27 master students from Dutch and European Universities.

NIOZ Marine Masters Course 'Exploring the Wadden Sea'. Contact persons prof. dr. H. Ridderinkhof and dr. H.C. de Stigter. 1-13 July.

Van der Wal, D. •Summer School Netherlands Centre for Coastal Research (NCK). Case Ecomorphology of saltmarshes, Den Hoorn, Texel, June.

Irregular courses:

Ecological applications of biomarkers in aquatic food web studies: 'Inferring diet information from stable isotope data using isotope mixing models' Contact person: dr. M. de Troch. 28 January–1 February.

Graduate program in hydrometeorology, University of Guadalajara, Guadalajara, Mexico, 24 September. Residual flows in the Dutch Wadden Sea. Contact person: M. Duran-Matute.

NIOZ. In house course 'Basic Flow Cytometry and Data analysis'. December 2013. Contact person: Louis Peperzak.

Practical training part of the 7-th international course on DEB theory, 15-23 April, International PhD course, 37 participants, contact person: Jaap van der Meer.

A selection of students and lecturers who were going for a hike on a lovely Sunday morning, 7th international Dynamic Energy Budget (DEB) theory course, April 15-23

Ondernemingsraad

In 2013 hebben zich een beperkt aantal wijzigingen voorgedaan in de samenstelling van de ondernemingsraad. Na zich gedurende een lange periode voor de OR te hebben ingezet is de secretaris Swier Oosterhuis afgetreden en vervangen door Kirsten Kooijman als vertegenwoordiger voor de groep onderzoeks- en laboratoriummedewerkers.

Ook heeft er zich een wijziging voorgedaan in de functies binnen de OR. De samenstelling is nu als volgt:

Voorzitter - Henk de Haas (vertegenwoordiger van de groep vaste en tijdelijke onderzoekers Texel).

Vicevoorzitter - Henk Bolhuis (vertegenwoordiger van de groep vaste en tijdelijke onderzoekers Yerseke).

Secretaris - Sander Holthuijsen (vertegenwoordiger van de groep onderzoeks- en laboratorium medewerkers Texel).

Vervangend secretaris - Ruud Witte (vertegenwoordiger van de groep medewerkers van de technische diensten, centrale diensten en stafeenheden Texel).

Lid - Sander Asjes (vertegenwoordiger van de groep medewerkers van de technische diensten, centrale diensten en stafeenheden Texel).

Lid - Yvonne van der Maas (vertegenwoordiger van de groep medewerkers van de ondersteunende diensten, stafeenheden Yerseke).

Lid - Loran Kleine Schaars (vertegenwoordiger van de groep onderzoek- en laboratoriummedewerkers Yerseke).

Lid - Ewout Adriaans (Vertegenwoordiger voor de groep varend en havenpersoneel).

Lid - Cees van Slooten (vertegenwoordiger van de groep tijdelijke medewerkers).

Lid - Theo Gerkema (vertegenwoordiger van de groep vaste onderzoekers).

De OR heeft op 18 april, 6 juni en 21 november formeel overleg gehad met de directie. In aanvulling hierop heeft ook verscheidene keren informeel overleg plaatsgevonden. Formeel overleg met het NIOZ-bestuur vond plaats op 17 mei en 28 november. De notulen van de vergaderingen zijn te lezen op de NIOZ intranet webpagina van de ondernemingsraad.

De ondernemingsraad heeft de directie geadviseerd in en zijn instemming verleend aan verscheidene door de directie aan de OR voorgelegde zaken. Voor een deel betroffen dit onderwerpen aangaande de komende aanpassingen van de NIOZ organisatie die samenhangen met de huidige financiële situatie. In 2013 heeft de NIOZ-OR positief advies uitgebracht op de voorgestelde aanpassing van het NIOZ organogram, het aan de NIOZ medewerkers aanbieden van een tweede collectieve zorgverzekering, een

beperkt aantal punten van het voorstel tot organisatieaanpassing en de herbenoeming van de heer Guus van der Kamp tot penningmeester van het bestuur van de Stichting NIOZ.

De ondernemingsraad heeft ingestemd met een nieuwe sollicitatiecode, een voorstel tot aanpassing van de Uitvoeringsregeling Stagiaires en het Risico Inventarisatie & Evaluatie Plan voor een aantal van de NIOZ afdelingen en laboratoria.

De ondernemingsraad heeft een negatief advies gegeven over de aanpassing van de NIOZ statuten.

In 2013 heeft de OR zich al intensief bezig gehouden met de voorbereiding van te verwachten advies- en instemmingsverzoeken aangaande de komende wijzigingen binnen de NIOZ organisatie.

Meetings

VOLC-OCEAN Kick-off meeting, NIOZ chair: Loes Gerringa, January 15-16. Proposal writing for EU, second round.

Darwin project HYPOXIA workshop, 23 January, NIOZ-Yerseke, Organizer: Filip Meysman.

NAEM Ecology symposium; participant H. Hummel; Lunteren, 5-6 February.; NIOZ Flow Cytometer Workshop Comparing organism detection instruments in measuring 2-10 µm and 10-50 µm plankton cells. NIOZ chair: Louis Peperzak. 11-14 February. Flow cytometry based organism detection technologies are readily available to meet the requirements for compliance monitoring and enforcement with ballast water management standards for indicative analysis. Some new approaches are in a developmental stage. To proof compliance with ballast water management standards a precise enumeration of cells according to their minimum dimension and at the same time a separation of living and dead cells is needed. Flow cytometry based systems are able to provide the enumeration and living/dead assessment analysis with the needed accuracy level, for both indicative and detailed ballast water sample analysis. However, additional developments are required to document the minimum dimension of organisms.

Conference Zeeuwse Banken (Eind Symposium MEP-Zandwinning); participants H. Hummel & V. Escaravage; Zoetermeer, 21 February.

EC Liaison meeting on Horizon 2020 programme; participant H. Hummel, The Hague, 7 March.

Session 'Marine Microbiology' of the joint annual meeting of the German and Dutch Societies of Microbiology (VAAM and NVvM), co-chair Lucas J. Stal, Bremen, Germany, 10-13 March.

Annual meeting of the North Sea Ballast Water Opportunity project. NIOZ chair: J.P. Boon. IMO World Maritime University, Malmö, Sweden, 11-12

March. The progress of the NSBWO project was explained to the projects' Steering Committee, which agreed with the plans of the work package leaders for the next and final year of the project. Work shops were held on training and capacity building for ship owners and crews, on the importance of transparency of test results of ballast water treatment systems during land-based and shipboard type approval tests, and under routine operational conditions, and on the possibilities for on board rapid testing to check whether treatment systems operate according to the degree of biological efficacy as specified in the D2 regulation of IMO and the 'Final Rule' of the US Coast Guard. 50 people attended the annual meeting.

WFD indicators for the North Sea workshop. Evaluation of composed indicators & Calculating numbers of samples taking distinctiveness into account. Chaired by S. Wijnhoven, during WFD indicator workshop organized by NIOZ-MEE, Den Haag, 12 March.

Annual meeting NCK on the "Sand Motor"; Netherlands Center for Coastal Research; participants H. Hummel & V. Escaravage; Den Haag, 14 March.

EC Directorate B.3 Research Infrastructure meeting "Towards a roadmap for biodiversity and ecosystem research in Europe"; participants H. Hummel & P. van Avesaath; Brussels, Belgium; 19-20 March.

Citclops (Citizens' Observatory for Coast and Ocean Optical Monitoring, Seventh Framework Programme FP7/2007-2013, project n° 308469) Project Board 1, PB1 meeting, Wernand, M.R., Texel, Netherlands, 20-22 March. Number of attendees: 19. Presentation of first results on implementation of participatory science.

Aeolian dust: Initiator, Player, and Recorder of environmental change, session at EGU General Assembly, Vienna, Austria, 8-11 April, Convener: J.-B.W. Stuut.

First International Workshop on Intriguing Filamentous Electrogenic Microbes (IFEMs). 15-17 April, Aarhus, Denmark. Organizers: Lars Peter Nielsen and Filip Meysman.

Brainstorm meeting 'Fish Migration River'; participant S. Wijnhoven; Delft, Netherlands, 13 May.

ESF-COST EMBOs WGBI workshop; Reports of researchers and students working in the EMBOs action on a European Marine Biodiversity Observatory System; Coordinator and organisers H. Hummel & P. van Avesaath, Zandvoort, 14-15 May.

ESF-COST EMBOs Management Committee Meeting, Reports of researchers and students working in the EMBOs action on a European Marine Biodiversity Observatory System, Coordinator & organisers H. Hummel & P. van Avesaath, Zandvoort, 16-17 May.

COST EMBOs Training School. Marine Biodiversity Observation: A system to bring theory and practice together'; Coordinator and trainers H. Hummel and P. van Avesaath; Santander, Spain 21-25 May.

Maritiem KennisCentrum meeting, Smit M.G., Stadnitskaia A., NIOZ, Texel, 23 May

OFEGL-TECH meeting, Smit M.G., Schilling J., Marum, Bremen, 21 November
EMBRC meeting on "Marine and biological sciences infrastructures interaction and collaboration", participants H. Hummel & S. Wijnhoven; Heraklion, Crete, Greece; 28-30 May.

Bookpresentation and Symposium 'Ecological Atlas of the Dutch Marine Mollusks', participant S. Wijnhoven, Leiden, 1 June.

NIOZ Science days, participants H. Hummel & S. Wijnhoven; Noordwijkerhout, 4-5 June.

CSA Oceans (JPI Oceans support action) Stakeholder Consultation Workshop on Marine Research Infrastructures; participant H. Hummel; Brussels, Belgium, 5 June.

Schaliegaswinning in Nederland. Avondsymposium KNAW, Organisatie en voorzitter: H.J.W. de Baar. Four lectures, attendance by scientists, policy makers, members of parliament, to maximum ~230 persons capacity of Tinnenbergen conference room. Amsterdam, 12 June. (<https://www.knaw.nl/nl/actueel/agenda/schaliegaswinning-in-nederland>)

Zoet-zout Platformdag, 'Waterverdeling en zoutindringing in het hoofdwatersysteem'; participant S. Wijnhoven, Utrecht, Netherlands, 13 June.

JERICO Mid-term Review; participant S. Wijnhoven; Paris, France, 18-19 June.

Toekomst beeld Friese Front en Oestergronden. Meeting IMARES, Den Helder, 14 August. Marc Lavaleye and Rob Witbaard visitors.

48th European Marine Biology Symposium (EMBS); President of EMBS H. Hummel; Galway, Ireland, 19-23 August.

MaCuMBA General Assembly, chair: Lucas J. Stal, Roscoff, France, 22-27 September. Workpackage leaders summarized the progress of the first 12 months of this EU FP7 project. PhD students and post-docs presented their scientific results in the symposium. One day was reserved for individual meetings of the workpackages. Two days were used for joint sampling of the local marine environment and subsequent exchange of isolation and cultivation methods in the laboratory.

2nd Biodiversity Knowledge conference: Towards a future Network of Knowledge on biodiversity and ecosystem services in Europe (EC 7th FW project KNEU); participant H. Hummel; Berlin, Germany; 24-26 September.

Workshop afwegingskader Rijksstructuurvisie Grevelingen/Volkerak-Zoommeer, 25 September, Middelburg, Meysman F., external expert.

Seagrulture: 2nd International Conference on exploring the seaweed chain. NIOZ Chair: Timmermans, K.R. Den Helder-Texel, 26-27 September. To express the importance of the new seaweed industry, 130 experts from 13 countries gathered at Seagrulture 2013. The conference had specific attention for the sustainable seaweed chain, with the following topics: Hatchery and Farming, Marine Spatial Planning, Market Chain Development, Mechanization, Pre-processing, Storage and Logistics, Biorefinery and products. The first day, with lectures and posters, was organised in Den Helder. The second day of the conference all attendees were invited at NIOZ, Texel,

where in the morning presentations were given. In the afternoon, a site visit to the NIOZ SeaweedCentre was organised.

VECTORS: Vectors of Change in Oceans and Seas Marine Life, Impact on Economic Sectors, Workshop WP; participant P. van Avesaath Lecce, Italy, 7-10 October.

Noordzeedagen; participants H. Hummel, S. Wijnhoven & V. Escaravage; Den Helder, 10-11 October.

De natuurwetenschappelijke basis van klimaatverandering. Avondsymposium KNAW. Major findings of IPCC Working Group I report Climate Change 2013, The physical science basis. Organisatie en voorzitter: H.J.W. de Baar. Four lectures, attendance by scientists, policy makers, members of parliament, to maximum ~230 persons capacity of Tinbergen conference room. Amsterdam, 11 October. (<https://www.knaw.nl/nl/actueel/agenda/minisymposium-de-natuurwetenschappelijke-basis-van-klimaatverandering>)

COST EMBOS WGBI workshop, the European Marine Biodiversity Observatory System; Chair & co-organisers H. Hummel & P. van Avesaath, Riga, Latvia; 14-17 October.

OFFSHORE ENERGY13. OFFSHORE Energy Exhibition & Conference; participant V. Escaravage, Amsterdam RAI, 15-16 October.

Stuut, J.-B.W. Precruise meeting RV Pelagia cruise 378, NIOZ, Texel, The Netherlands, 16 October.

JERICO workshop. Possible strategies and potentials for JERICO to become a network for biodiversity observation. Chaired by S. Wijnhoven, during JERICO WP10 workshop, Villefranche-s-Mer, France, 16-18 October.

Stuut, J.-B.W. Kick-off meeting ERC project DUSTTRAFFIC, NIOZ, Texel, The Netherlands, 17-18 October.

Annual meeting of the EU-funded project "Future of Reefs in a Changing Environment", Corpus Christi, Texas, USA, 31 October-1 November.

VECTORS: Vectors of Change in Oceans and Seas Marine Life, Impact on Economic Sectors, General Assembly Meeting; participant P. van Avesaath; Athens, Greece, 4-7 November.

CEDA FORUM 2013. Dredging in a changing world; participant V. Escaravage, Rotterdam Netherlands, 7 November.

Brainstorm meeting 'Tidal Testing Centrum Grevelingendam'; participant S. Wijnhoven, Almere, 7 November.

MIDAS kickoff meeting, London, 11-15 November. K. Soetaert.

Zoet-zout Platformdag, 'Estuariene gradienten in Zuidwestelijke delta en Wadden: ambitie, praktijk en beleidsvoornemen'; participant S. Wijnhoven, Utrecht, 14 November.

Kick-off meeting on the Fixed Point Open Ocean Observatory Network, participant H. Hummel; (FixO3); Rome, Italy; 18-20 November .

COST EMBOS WGPS workshop, the European Marine Biodiversity Observatory System, Chair & co-organiser H. Hummel and P. van Avesaath; Anavyssos, Greece, 20-22 November.

Schelde Symposium; participant V. Escaravage; Antwerp, Belgium, 21 November.

GATEWAYS (ITN Marie Curie, FP7 project) steering committee meeting, Chair: G.J. Reichart and C. Cléroux, annual meeting of the Gateways Pls. 28-29 November, NIOZ,

Workshop "Dynamic Energy Budgets of Cold Water Coral", Yerseke, 3 December, Gerla, Germany.

The DIACORA project, meeting partners at Iris, Stavanger, Norway, 9-11 December, Gerla, Germany.

Netherlands Annual Ecology Meeting, contact person: Jaap van der Meer, chairman of the organization committee. The Netherlands Annual Ecology Meeting is a two-day event organised by NERN (Netherlands Ecology Research Network) and NECOV (Dutch-Flemish Ecological Society) and supported by the Netherlands Organisation for Scientific Research (NWO). The set-up of the 2013 meeting was in accordance with previous years, and was again a great success with over 300 participants.

Mini-Symposium 'Electron transfer processes in the subsurface' at the joint annual meeting of the German and Dutch Societies of Microbiology (VAAM and NVvM), co-chair L.J. Stal

- 18 September. Lieke Mulder (NIOZ-YES). Having a DIP: Seasonality and Nutrient Dynamics in the DIP-limited western Wadden Sea.
- 26 September. Ronald de Vries (CBS-KNAW). Degradation of biomass of terrestrial plants and algae by fungi.

- 30 September. Andrea Taramelli (ISPRA). Innovative use of Copernicus remote sensing data: identifying ways for analyzing coastal ecosystems.
- 1 October. Jean-Philippe (Belliard University of Trento). Modelling the morphological evolution of tidal drainage networks.
- 3 October. Meinard Tiessen (NIOZ, FYS). The drift of plaice eggs and larvae across the North Sea: studying fish by modelling physics.
- 10 October. Matias Duran Matute (NIOZ, FYS). Residual circulation and freshwater transport in the Dutch Wadden Sea.
- 17 October. Matthijs van der Geest (NIOZ, MEE). Multi-trophic interactions within the seagrass beds of Band d'Arguin, Mauritania: a chemosynthesis-based intertidal food web.
- 24 October. Sebastiaan Rampen(NIOZ, BGC). Long chain diols: applications for climate reconstruction.
- 30 October. Christian Mohn (Aarhus University). Benthic hydrodynamics at cold-water coral provinces: A high resolution model study in the NE Atlantic.
- 31 October. Furu Mienis (NIOZ, GEO). New insights on cold-water coral growth and mound development.
- 7 November. Scarlett Trimborn (AWI). The availability and the source of iron modulate ocean acidification effects in Antarctic phytoplankton.
- 5 December. Marta Rodrigo (NIOZ, BGC). Testing and applying the Long chain Diol Index (LDI) as a novel marine paleotemperature proxy in combination with other organic proxies.

External functions

H. Bolhuis

- Editorial Board -Aquatic Biosystems - <http://www.aquaticbiosystems.org>
- External Expert/Examiner Hogeschool Zeeland, Vlissingen.

K. Booij

- Member of the ICES Marine Chemistry Working Group.

J. Boon

- Project manager of the NSBWO project and leader of work package 1 of the NSBWO project.

H. Brinkhuis

- Member POGO,
- Member EU Marine Board
- Member BuZa/EZ Klankbord groep Horizon 2020
- Member bestuur ZeelnZicht
- Member/vice chair Acroporanet
- Member stuurgroep CNSI/vice chair
- Member Raad van Advies WaLTER
- Member scientific Board Waddenacademie

- Member scientific Board Darwin Centre
 - Chair LPP Foundation
 - Chair NWO NL IODP commissie
 - Various NWO scientific commissions, o.a. Caribbean call
 - Member MKI
 - Member advisory board ERICON scientific
 - Co-director Urbino Summer School Paleoclimatology.
- T.J. Bouma
- Copromotor doctoral thesis Marjolijn Christianen (Radboud University Nijmegen) & thesis Thorsten Balke (Radboud University Nijmegen)
 - Opponent at the PhD defense of Roos Veeneklaas (Groningen University) and Miguel Lara Rallo: (University Cadiz, Spain)
 - Part-time hired by HZ-Vlissingen, for 10% of the time (scientific quality control of the research within the Centre of expertise)
 - Part-time appointment at Deltares, for up to 20% of the time (supervision of 2 PhD projects)
 - Project leader for several external funded scientific projects.
- G.-J.A. Brummer
- Professor (Palae)oceanography and Geochemistry, Institute for Earth Sciences, VU University Amsterdam
 - Member Steering Group GATEWAYS (EU-FP7, MC-ITN)
 - Member NWO/ALW gebruikersadviesgroep verankerde instrumentatie (GAG-VI)
 - Member Steering Group INATEX (NWO/ZKO-oceans).
- G.C. Cadée
- Associate editor ICHNOS
 - Member editorial board Natura KNNV
 - Member board Historie Oceanografie Club, HOC
 - Gastmedewerker Rijksmuseum Amsterdam.
- C.J. Camphuysen
- Editorial board ICES Journal of Marine Science
 - Editorial board Seabird (The UK Seabird Group)
 - Editorial board Sula (Nederlandse Zeevogelgroep)
 - Member board of directors (representative for Europe), World Seabird Union
 - Member ICES Working Group Seabird Ecology (WGSE)
 - Member European Seabirds At Sea Database.
- C. Cléroux
- Member of the scientific committee for the PAGES Young Scientific Meeting, Goa (India), 11-12 February 2013
 - Member of the SCOR WG138, Modern Planktic Foraminifera and Ocean Changes
 - Organizer of the SCOR WG138 Workshop "Standardization of collection

methods for living planktonic foraminifera", Prague, Czech Republic, 24-26 June.

H.J.W. de Baar

- Chairman, Section Earth Sciences, KNAW
- Vice-chairman, Council for Earth and Life Sciences, KNAW
- Member, Raad van Toezicht, Maritime Centre Netherlands (MCN Den Helder).

T. F. de Bruin

- Chair - Netherlands National Oceanographic Data Committee (NL-NODC)
- IODE national coordinator for data management
- Member - OceanSITES Data Management Team
- Member – ICES Working Group on Data and Information Management (ICES-WGDIM)
- Member - Steering Committee of the Marine Metadata Interoperability (MMI) project
- Member - Southern Ocean Observing System (SOOS) Data Management Sub-Committee
- Acting Chief Officer until Oct 13. After Oct. 13 Chief Officer – SCAR Standing Committee on Antarctic Data Management (SCADM)
- Member Review Team UK MEDIN (Marine and Environmental Data and Information Network)
- Member Advisory Group Norwegian NMDC (Norwegian Marine Data Centre project)
- Member Review Team Swedish ECDS (Environment Climate Data Sweden facility)
- Member NWO Klankbordgroep datamanagement.

L.J. de Nooijer

- Guest senior scientist at the Alfred Wegener Institute for Polar and Marine Research, Bremerhaven, Germany.

H.C. de Stigter

- Chairman NWO-ALW gebruikersadviesgroep bodembemonsteringssystemen en seismiek (GAG-BSS).

T. Gerkema

- Member NCK Programma Commissie
- Co-director thesis (B. Aguiar-González, Universidad de Las Palmas de Gran Canaria).

L.J.A. Gerringa

- Member Netherlands Polar Committee (NPC).

J. Greinert

- Guest professor in Marine Geology, Ghent University, Belgium
- Chairman COST Action ES0902 'PERGAMON' (EU-ESF).

H. de Haas

- Member NWO-ALW gebruikersadviesgroep bodembemonsteringssyste-

men en seismiek (GAG-BSS).

H. van Haren

- Member Institutional Board ANTARES neutrino telescope
- Member Institutional Board KM3NeT
- Chairman "ALW gebruikersadviesgroep Verankerde Instrumentatie"
- Chairman "ALW-GAGvoorzittersplus".

P.M.J. Herman

- Member Commission Monitoring Westerschelde for VNSC
- Member Science Committee Ifremer, France
- Member programme committee NCK
- Member Ecoshape User commission
- Jury member doctoral thesis of Matthijs van der Geest, Serena Donadi,
- Copromotor doctoral thesis Quan-Xing Liu, Marjolijn Christianen
- Promotor doctoral thesis Thorsten Balke
- Member North Sea Research panel Rijkswaterstaat
- Course at NCK summer school, Texel, July
- Member science advisory commission Mosselwad
- Member expert advisory commission LifeWatch Flanders
- Member panel Schure-Beijerinck-Popping fund.

H. Hummel

- Professor in Estuarine Ecophysiology, Institute of Oceanography, University of Gdańsk, Gdańsk, Poland
- President of the MARS Network, the European Marine Research Stations Network
- President of the European Marine Biology Symposium (EMBS) series
- Member steering committee WAMS (World Association of Marine Stations)
- General Coordinator (Action Chair) of the ESF COST Action EMBOS European Marine Biodiversity Observatory System
- Member Steering Committee EC 7th FW project EuroMarine
- Member External Evaluation Board of LifeWatch Greece (HelBioNet)
- Member of the International Advisory Board of CORPI (Coastal Research and Planning Institute) at the Klaipeda University, Lithuania.

F.A. Koning

- Chair Ocean Facilities Exchange Group (OFEG)
- Member International Research Ship Operators (IRSO)
- Member European Research Vessel Operators (ERVO)
- Member NERC Cruise Programme Review Group (CPRG)
- Member NERC Marine Facilities Advisory Group (MFAG).

B. Koster

- Member NWO-ALW gebruikersadviesgroep bodembemonsteringssystemen en seismiek (GAG-BSS).

J. Kromkamp

- Guest editor Aquatic Biology for special volume "environmental forcing

- of aquatic primary productivity" as a result of the GAP (Group on Aquatic Primary Production) workshop in Malaga, September 2012
 - Member international board of the Group for Aquatic Primary Productivity (GAP)
 - Member PhD thesis defense committees for Susanna Wilken (University of Utrecht, 27 March) and Gemma Kulk (University of Groningen, 6 September)
 - Member of the "Zeeuwse Wetenschapsraad (Scientific board of the province of Zeeland)
 - Member of the kernteam "Kennis Netwerk DeltaWater (KNDW)."
- J.W. de Leeuw
- Guest professor Faculty Geosciences, Utrecht University
 - Guest professor Faculty Biology, Utrecht University
 - Professorship in Geochemistry University of Cataluna
 - Member of the Royal Dutch Academy of Sciences (KNAW)
 - Geochemical Fellow ACS
 - Member Independent Scientific Advisory Board (ISAB) INSITE Program.
- L.R.M. Maas
- Professor Ocean wave dynamics – IMAU, Utrecht University
 - Member scientific board CIIMAR – Porto University
 - Member thesis defense committees M. den Toom (UU, 20 March) and A. Cimatoribus (UU, 5 July).
- F.J.R. Meysman
- Coordinator Darwin project 'HYPOXIA Grevelingen'
 - Editor Journal of Marine Research
 - Editor BiogeosciencesMember Scientific Advisory Board, company OVIZIO
 - Membership PhD committee Ugo Marzocchi, Aarhus University, 30 May
 - Membership PhD committee Guillaume Bernard, Bordeaux University, 6 July.
- F. Mienis
- Guest editor Deep Sea Research II, Special Volume on Cold Corals.
- L. Peperzak
- Work package leader North Sea Ballast Water Opportunity Project
 - Member Infrastructuur & Milieu Expert Groep Ballastwater
 - Member of GlobalTestnet on behalf of the NIOZ Ballast Water Test Facility and Research Centre
 - Member of the ICES/IOC/IMO Working Group on Ballast and Other Ship Vectors.
- T. Piersma
- Professor Global Flyway ecology at the Centre for Ecological and Evolutionary Studies (CEES) at the University of Groningen
 - Editor of Journal of Avian Biology
 - Editor of Functional Ecology
- Editorial board of Journal of Ornithology
 - Editorial board of Movement Ecology
 - Editorial board of Emu
 - Vice-Président of the Conseil Scientifique of the Banc d'Arguin (CSBA), Mauritania
 - Chairman of the *Global Flyway Network*
 - Member of KNAW, Amsterdam.
- G.J. Reichart
- President of the Biogeosciences division of the European Geosciences Union
 - Program Chair of the 2013 General Assembly of the European Geosciences Union
 - Assistant Professor, Earth Science Department, Geosciences Faculty, Utrecht University
 - Guest Senior scientist at the Alfred Wegener Institute for Polar and Marine Research, Bremerhaven, Germany
 - Member of the NWO-ALW gebruikersadviesgroepen verankerde instrumentatie (GAG-VI), bodembemonsteringssystemen en seismiek (GAG-BSS) en GAG-voorzitters-plus
 - Interim Member Steering Group GATEWAYS (EU-FP7, MC-ITN).
 - Lecturer Urbino Summer School, Urbino, Italy, 10-30 July.
- H. Ridderinkhof
- Member bestuur Tidal Testing Centre
 - Member Raad van Advies Stichting Texels Museum/Ecomare
 - Member deelnemersraad EcoShape Building with Nature
 - Member Raad van Advies Texel 2020.
- M.J.A. Rijkenberg
- Member of the Scientific Steering Committee of the international GEOTRACES program under aegis of SCOR/ICSU
 - Associate member of the SCOR working group 139: Organic ligands – A key control on trace metal biogeochemistry in the ocean.
- S. Schouten
- Part-time professor Molecular Palaeontology, Faculty of Geosciences, Utrecht University
 - Associate editor Organic Geochemistry
 - Member of the Netherlands Integrated Ocean Drilling Program Committee.
- J.S. Sinninghe Damsté
- Part-time professor Organic Geochemistry, Faculty of Geosciences, Utrecht University
 - Member of the Royal Dutch Academy of Science (KNAW)
 - Member of the KNAW council for Earth & Life Sciences
 - Member of the Scientific Steering Committee of the Darwin Centre for

Biogeology

- Associate editor *Geochimica et Cosmochimica Acta*
 - Member of the Editorial Board *Environmental Microbiology*.
- M.G. Smit
- Member Ocean Fleet Exchange Group – Technology section
 - Member NWO Instituut Platform Kennis Benutting
 - Member NWO Technologie Overleg.

K. Soetaert

- Member of the FWO scientific commission 'bio' (Belgium)
- Member of the NWO vidi commission (The Netherlands).

L.J. Stal

- Professor Mariene Microbiologie, University of Amsterdam
- Editor *Annals of Microbiology*
- Editor *Plos-One*
- Editorial Board *ISME Journal*
- Editorial Board *Frontiers in Aquatic Microbiology*
- Coordinator NWO-ZKO project NICYCLE
- Coordinator EU-FP7 project MaCuMBA
- Workpackage leader EU-FP demonstration project InteSusAI
- Coordinator EMBRC-NL and associated member of EMBRC (ESFRI preparatory phase Research Infrastructure).

J.-B.W. Stuut

- Senior scientist at MARUM – Center for Marine Environmental Sciences, University of Bremen, Germany
- Founding member of International Society for Aeolian Research
- Member editorial board Aeolian Research
- Advisory editor *Netherlands Journal of Geosciences*
- Coördinator INQUA Project (PASH2)
- Member Nederlands IODP Commissie
- Member INQUA-Nederland bestuur.

D. W. Thieltges

- Associate Editor *International Journal of Parasitology: Parasites and Wildlife*
- Editorial Board of *Journal Sea Research*
- Subject Editor for *Marine Biology Research*.

P. van Avesaath

- Working Group Leader of the ESF COST Action EMBOSS European Marine Biodiversity Observatory System
- Representative of NIOZ as grant holder of the ESF COST Action EMBOSS European Marine Biodiversity Observatory System
- Co-founder of the MarBEF+ Association under Dutch Law, with its seat at NIOZ.

J. van de Koppel

- Selection committee for the 2013 NWO-Rubicon grants.

D. van der Wal

- Coordinator RWS Bodemdieren Westerschelde project
- Project leader NWO-Ruimteonderzoek – Benthic diatoms as indicators for ecosystem structuring
- Project leader NWO-Ruimteonderzoek - Consequences of global change for ecosystem engineering effects of shellfish
- Member 'Flexibel Stortoverleg' (subgroup Technical Schelde Committee).

J. van der Meer

- Professor in Marine Population Ecology at the Institute for Ecological Sciences at the VU University Amsterdam
- Editor of *ISRN Oceanography*
- Chairman of the Netherlands Annual Ecology Meeting organization committee
- Chairman of the Third International DEB Symposium organization committee
- Member of the Management Board of MARES (Doctoral Programme on Marine Ecosystem Health and Conservation)
- Member of the advisory board Natuurbehoud of the Prins Bernhard Cultuurfonds
- Member of the KNAW Schure-Beijerinck-Popping fund
- Member of the ICES working group WKVHES.

H.W. van der Veer

- Member of the ICES Working Group on Recruitment Processes
- Member Organizing Committee 9th International Symposium on Flatfish Ecology, Seattle, The Netherlands
- Guest editor Proceedings 8th International Symposium on Flatfish Ecology.
- Editor-in-chief *Journal of Sea Research*.

F.C. van Duyl

- Board Member Treub MIJ
- Appointed reviewer International Foundation for Science (IFS)
- Board Member AcroporaNet
- Dutch representative Marine Board European Scientific Diving Panel.

L. Villanueva

- Member of the editorial board of *International Microbiology Journal*.

Tj.C.E. van Weering (Sci. Emeritus)

- Professor Paleoceanography, Institute for Earth Sciences, VU University Amsterdam
- Member Programme Committee to the Scientific Programme Indonesia – Netherlands (SPIN) of the Royal Netherlands Academy of Arts and Sciences (KNAW)
- Member editorial board *Boreas*
- Member steering committee COCARDE/ESF

- Guest editor Deep Sea Research II, Special Volume on Cold Corals
 - Advisor NWO-NIOZ regarding Caribbean Netherlands Science Institute at St. Eustatius
 - Member program committee Netherlands Caribbean programme (NWO).
- M.R. Wernand
- First opponent of evaluation of doctorate thesis and member of the reading committee of Anna Solvang Båtnes' dissertation (September) at the Norwegian University of Science and Technology, the Faculty of Natural Sciences and Technology
 - First opponent of evaluation of doctorate thesis and member of the reading committee of Julia A. Busch dissertation (December) at University of Bremen, Department 2 (Biology/Chemistry), Germany
 - EARSEL representative
 - General chair and program committee member 3rd EOS Topical Meeting on Blue Photonics® - Optics in the Sea.
- R. Witbaard
- Conference Delegate for the 3rd International Sclerochronology conference, Caernarfon North Wales, UK.
- T. Ysebaert
- Professor University of Antwerp (0.05 fte), course Ecological Engineering, Advanced Master of Science in Technology for Integrated Water Management
 - Member scientific committee Building with Nature project.
- Guests**
- Callaghan, D., School of Civil Engineering, The University of Queensland, Australia, 1 April–22 April.
- Charnier, J., Universite de Bordeaux, France, 1 January–31 August.
- David, H. BSc., Department of Plant Biology and Ecology, Universidad del País Vasco, Spain, 7 January–7 May.
- Davidson, R., University of Otago, New Zealand, 13 January–22 February.
- Genuario, D., Centro de Energia Nuclear na Agricultura, Universidade de São Paulo, Brasil, 11 January–31 December.
- Gommeaux, dr M., Université de Reims Champagne-Ardenne, France, 1 January–30 August.
- Kunihiro, dr. T., Center for Marine Environmental Studies (CMES), Ehime University, Japan, March–December.
- Lima Sobrinho, R., Department of Geochemistry, Niteroi, Rio de Janeiro, Brazil, 13 May–31 December.
- Kloosterziel, dr. R., SOEST, Hawaii, USA, 1–22 August.
- Malkin, dr. S., Vrije Universiteit Brussel, Belgium, 1 January–31 December.
- Montserrat Trotsenburg, dr. F., Vrije Universiteit Brussels, Belgium, 1 January–31 December.
- Parari, M., University of Barcelona, Spain, 1 April–28 June.
- Paul, M., University of Hamburg, Germany, 1–16 July.
- Quaijtaal, W., Universiteit Gent, Belgium, 9 June–6 July.
- Simon, M., Cardiff University, UK, 1–26 April.
- Sliwinska, K., Aarhus University, Denmark, 4 March–15 April.
- Taha, I., Universiteit Wien, Oostenrijk, 1 Januari–28 February.
- Velilla Perdomo, E. VU University Amsterdam, 1 March–30 August.
- Weber Y., University of Basel, Switzerland, 7–31 January, 22 April–17 May.
- Yaakub, S.M., National University Singapore, Singapore, 6 May–25 June.
- Zetsche, dr. E., Vrije Universiteit Brussel, Belgium, 1 January–31 December.
- Students & interns (Master, HBO & MBO)
- Adamopoulou, S., Ghent University, Belgium, 25 February–28 June.
- Bal, C., Hogeschool Rijnijsel, Nijmegen, 1 February–30 June.
- Bik, S., CAH Vilentum Almere, April–October.
- Biller, T., University of Bologna, Italy, January.
- Bloem, M., VU University Amsterdam, 1 January–15 July.
- Busink, S., Universiteit Wageningen, 24 April–30 June.
- Chu, N.Y., Radboud University Nijmegen, Nijmegen, 17 January–31 October.
- Ciurej, A., Institute of Geological Sciences, Polish Academy of Sciences, Kraków, Poland, September–November.
- Collet, C., IUT génie biologique de Perpignan, France, 15 April–15 August.
- Dalhuijsen, K.F.J. Nova college Beverwijk, 27 February–19 July.

- Whalen, C. Universiteit van Amsterdam, 1 January-1 September.
- Wijers, T., Groningen University, 1 January-1 February.
- Witteveen, K. Hogeschool van Hall Larenstein, Leeuwarden, Netherlands, 4 February-4 July.
- Zaffonti, F., University of Florence, Italy, 15 October-31 December.
- Zawadowski, T., 6 September-31 December.
- Zell, K., University of Cologne, Köln, Germany, August.
- Zwep, K. Utrecht University, 22 April-26 June.

Visitors

- Bhuckory, R., 1st secretary at Mauritius High Commission, en Mr. Kandasamy, High Commissioner Mauritius, 25 en 26 September.
- Blyth, A.J., The Open University, Milton Keynes, UK, 27 May-5 June.
- Bondoc, K., International Max Planck Research, Friedrich-Schiller-Universität Jena, Germany, 1-9 August.
- Burns, dr. N, Department of Limnology, University of Vienna, Austria, 14-22 January
- Davidsz, E., greenSand BV, 18 December
- De Moor, J., The Netherlands, 13 November.
- Dedecker, P., Australian National University, Canberra, Australia, 2-10 February, 8-10 September.
- Directie AWI, + ondertekening MoU, 29 October.
- Directie Energy Valley, 30 October.
- Directie IHC Merwede, 12 September.
- Directie NARLabs Taiwan, 24 September.
- Directie NEth-er, 17 December.
- Directie NOGEPA, 27 November.
- Directie Nudge, 8 October.

Directie Shell, 26 September.
Directie TNO, 17 January.
Directie UNESCO/IHE, 15 November.
Directie VLIZ, 1 October.
Donders, T., Utrecht University, The Netherlands, 7-17 May.
Filippidi, A., Utrecht University, The Netherlands, 4 October.
Fortuin, dr. A., Waterschap Scheldestromen, Terneuzen, 15 July.
Friese, C., MARUM - Center for Marine Environmental Sciences, Bremen, Germany, 15-19 July.
Gremare, Prof. A., Bordeaux University, France, 23 January.
Halibur, J., Large Lakes Observatory, University of Minnesota Duluth, USA, 4-21 February.
Havinga, prof. dr. P., Twente University, 29 August.
Tamiya, prof. dr. E., Osaka University, 19 July.
Fraiture, prof. dr. Ch. de, Unesco IHE, 15 November.
Huis in 't Veld, H. Topsector Water, 5 November.
Hunter, dr. W., University of Vienna, Austria, 19-23 August
Knops, ir. P., Innovation Concepts BV / KU Leuven, Belgium.
Lantink, M., Utrecht University, 4 October.
Mattiello, I., University of Sao Paulo, Brasil, 3-5 December.
Mattos dos Santos, dr. R., KU Leuven, Belgium, 18 December.
Miserocchi, S., Istituto Scienze Marine CNR, Bologna, Italy, 8-12 July.
Mohn, dr. M., Aarhus University, Denmark, 29-30 October.
Morana, MSc C., Leuven University, Belgium, 13-14 January
Moros, M., Institute for Earth Sciences, Kiel, Germany, 22-24 April.
O'Hanlon, R., 18-20 December.
Park, dr. Y.-S., Dundee University, UK, 17 June.
Poulin, Prof. Dr. R., Zoology department, University of Otago, New Zealand,
1-5 May.
Prins, M., VU University Amsterdam, 4,15-26 April.
Rabaey, Prof. K., Ghent University, Belgium, 28 February.
Rouselle, G., 5-16 March.
Scussolini, P., VU University Amsterdam, 19 March.
Straathof, C., VU University Amsterdam, 2-5 April.
Taramelli, A., ISPRA Institute for Environmental Protection and Research,
Rome, Italy.
TKI Maritiem, 23 May.
Ufkes, E., VU University Amsterdam, 2-5 April.
Ullgren, dr. J., Bergen University, Norway, 29-30 June and 21-23 September.
Woulds, dr. C., Leeds University, UK. 27-31 May.
Wu, J., Utrecht University, 18-22 November.
