SCOTTISH SEA FISHERIES STATISTICAL TABLES, 1995

CONTENTS

	<i>Pages</i>
Introduction and explanatory notes	6 - 7
Tables	
 Landings into the United Kingdom and abroad	
1a Landings into the U K, country of landing, live weight and value of species groups, 1991-1995	8
1b Landings by U K vessels into the U K and abroad, live weight and value of species groups, 1991-1995	9
2 Landings into the U K by country of landing, live weight and value of major species, 1991-1995	10
 Landings by United Kingdom vessels	
3 Landings by U K vessels, total allowable catches, U K quotas and uptake, live weight, 1991-1995	11 - 19
 Landings into Scotland by United Kingdom vessels	
4 Landings into Scotland by U K vessels, weight of species landed, 1988-1995	20
5 Landings into Scotland by U K vessels value of species landed, 1988-1995	21
6 Landings into Scotland by U K vessels, average value of species landed, 1988-1995	22
7 Landings into Scotland by U K vessels, Species by landing district, weight and value, 1995	23 - 29
8 Landings into Scotland by U K vessels, landing district by weight and value, 1991-1995	30 - 31
9 Landings into Scotland by U K vessels, major species, month by weight, value and average price, 1991-95	32 - 33
10 Landings into Scotland by U K vessels, month by major fishing methods, value, 1991-1995	33
 Landings into Scotland by United Kingdom vessels from specified ICES areas	
11 Landings into Scotland by U K vessels from specified ICES areas, 1995	35 - 38
 Landings abroad by Scottish vessels	
12 Landings abroad by Scottish vessels, main species by year, 1991-95	39
13 Landings abroad by Scottish vessels, country of landing by year, 1991-95	39
 Landings by Scottish vessels and other United Kingdom vessels	
14 Landings into Scotland by vessels based in Scotland, base district of vessel by landing district, 1995	40 - 41
15 Landings by Scottish vessels in England, Wales and Northern Ireland by main ports, 1995	42
16 Landings by Scottish vessels in England, Wales and Northern Ireland by species, weight and value, 1991-95	42
17 Landings by Scottish vessels and U K vessels into the U K, weight and value, 1995	42
18 Landings into Scotland by U K vessels by Nationality, species group and length group, weight and value, 1995	43
 Landings into Scotland by United Kingdom vessels	
19 Landings into Scotland by U K vessels, weight and value, landing district and creek by species group, 1995	44 - 46
 Landings into Scotland by Foreign vessels	
20 Landings into Scotland by foreign vessels, weight and value by species, 1991-1995	47
21 Landings into Scotland by foreign vessels, nationality of vessel by weight and value, 1991-1995	48
22 Landings into Scotland by foreign vessels, catches from ICES areas by species, 1995	49
23 Landings into Scotland by foreign vessels, nationality of vessel, landing district and number of arrivals, weight and value, 1995	50
24 Total landings into Scotland by all vessels, 1991-1995	51

Scottish Fishing vessels and fishermen

	<i>Pages</i>
25 Scottish fishing vessels, number of vessels by length (metres), 1991-95	52
26 Number of fishing vessels based in Scotland, base district by length (metres), December 1995	52
27a Scottish fishing fleet, number of vessels by normal method of fishing, 1991-1995	53
27b Number of Scottish fishing vessels 10 metres and over by normal method of fishing, 1991-95	53
28 Fishermen employed in Scotland, 1991-95	54
29 Number of Scottish fishing vessels and fishermen employed, district by length of vessel and employment status, 1995	54

Disposal and Processing of fish

30 Disposal of landings of herring, mackerel and sprat into Scotland by U K vessels, 1991-95	55
31 Raw materials used in the production of fishery by-products, 1991-95	55
32 Production of fishery by-products, weight and value, 1991-95	55

EXPLANATORY NOTES

Species

The various species of fish are divided into 3 main groups; Demersal, Pelagic and Shellfish. Demersal species live on or near the sea bed; pelagic species are found mainly in shoals near the surface.

Landings

Data on landings in Scotland is obtained from sales notes completed at the first auction of the fish, and additional information on effort and grounds is obtained from the EC log book completed by the skippers. The quantities in Tables 1, 2 and 3 are expressed in live weight and all others in standard landed weight; in the case of Demersal fish (excluding Norway pout and Sandeels this means gutted fish with head on; for the other species including shellfish it means whole fish).

Vessels (Tables 25, 26, 27 and 29)

Data on vessels is obtained from records kept by the Department and updated by reports of officers in the Sea Fisheries Inspectorate based at each of the Sea Fisheries Districts. All vessels actively engaged in commercial fishing and registered under the Merchant Shipping Act of 1988 are recorded. The base district of a vessel is the district of residence of the skipper or the majority of owners.

Fishermen employed (Tables 28, 29)

Estimates of numbers of fishermen regularly and partially employed are made at 31 December each year by the Fisheries Officers in each Sea Fisheries District.

Disposal of fish (Table 31)

This data is obtained from fish processing plants in each fishery district, by interview or by questionnaire.

Symbols used in tables

The following symbols are used in the tables;

- + less than half final digit
- .. not available
- nil

Rounding

In some tables, where figures have been rounded, the sum of the constituent items may not always agree exactly with the totals shown.

Fishing Regions

The International Council for the Exploration of the Sea (ICES) fishing areas (Divisions) are defined on the map before table 11.

Other Departmental Publications on Scottish Sea Fisheries

The Scottish Fishing Fleet: annual publication lists details of each vessel in the Scottish fleet and contains summary statistical tables about the fleet over the last 10 years. 1995 edition price £6.

This publication is available from HMSO Bookshop, 71 Lothian Road, Edinburgh, EH3 9AZ. Telephone 0131 228 4181. Please enclose remittance with order.

DESCRIPTION OF FISHING METHODS REFERRED TO IN THE TABLES

Demersal trawl. The gear consists of a net in the shape of a funnel attached to the vessel by wire ropes or 'warps'. As the net is towed over the sea floor the mouth is kept open by a combination of boards, floats and weights. The tail end of the net where the fish are trapped is known as the 'cod end'. The length of the warps is normally about 3.5-4 times the depth of the water and can extend in depths of 100m to 450m from the stern of the vessel. Other single-vessel trawling methods ('*Industrial trawl*', '*Queen scallop trawl*', '*Shrimp trawl*' and '*Nephrop trawl*') follow the same principles. *Nephrop trawl* is used by 'inshore' vessels in the 10m-25m group, many of which are multi-purpose and may also use *seine nets* (see below), if so rigged a vessel can tow 2 or more smaller type Trawls (*Nephrop twin/multiple trawl*).

Pair trawl (two boat trawl). A variant of trawling used to fish at intermediate depths between the surface and the sea floor. The net is towed by two vessels which may be up to 400m apart, the depth of the net being mainly controlled by the length of the warps and the vessels' speed, used by vessels in the inshore fleet for catching both Demersal and Pelagic species.

Pelagic trawl (single boat). Works on the same principle as Pair trawl but the vessels' speed when towing its trawl is greater than for Demersal species.

Seine net. Another bottom fishing method. The gear consists of a sac of netting with wings on either side, kept in position vertically by floats and weights. Long warps are attached to the net, one of which is initially fastened to a flagpole passed through a buoy ("dahn buoy"). The vessel steams forward paying out warp, then the net itself, then more warp to form a rough triangle back to the dahn, which may be some 1-3kms distant from the net. The vessel then steams ahead, causing the warps to herd the fish into the path of the net, which is finally winched aboard.

Purse seine. This method involves complete encirclement of a shoal or area known to contain fish. As the name implies the net, which may be up to 1200m long and 240m deep, is shaped like a purse. One end is first attached to a buoy, and the vessel then steams round the shoal paying out the net as it goes. On return to the buoy the net is closed at the foot or 'purse'. The net is then winched to the side of the vessel and the fish taken on board by means of a fish pump. This gear requires relatively heavy equipment and is not generally suitable for vessels below 20m; used to catch pelagic species mainly Herring, Mackerel and Sprats. Ring nets are similar except that the net is much smaller and operated by two vessels. This last method is now uncommon, but still used by a few relatively small vessels on the West Coast of Scotland.

Beam trawl. The beam trawl is a bottom fishing trawl net, used mainly for catching flatfish with the headrope attached to a beam towed along the bottom on runners at either end. The net is heavily weighted with chain on the underside and has tickler chains running in front when fishing.

Gill nets. Sheets of netting each about 35m long and totalling up to 1500m or more are paid out to form a curtain or barrier in the path of on-coming fish. The net is kept vertical by floats on the headrope and a heavy footrope, the fish being caught in the mesh by their gills. For white fish the nets are anchored near to the sea floor from which they are made to stand upright (by means of floats) like a fence.

Great lines. These are lines of thin rope totalling up to 15,000m long with hooks attached at intervals. The hooks are baited and the lines then laid along the sea floor, their position being marked by floats at each end. This method is especially suitable for rocky and uneven grounds where other methods may be impracticable. Used by vessels in the 25m-30m groups, which may be away for up to 3 weeks or more on each trip. There are now few vessels using this method in the Scottish fleet.

Small lines. Work on the same principle, but the vessels are smaller and usually return to port every day.

Creels. These are traps or 'pots' used to catch shellfish, especially lobsters, nephrops and crabs. The pots vary in size and are generally made from a combination of wood, cane and netting. They are normally arranged on the sea floor in lots between 10 and 50, depending on the capacity of the vessel fishing, and are checked (weather permitting) daily.

Mechanical dredge. Used to catch scallops, queen scallops and cockles. The apparatus consists of a steel framed 'mouth' attached to a bag of light metal link chain. As the dredge is towed along the sea floor metal teeth attached to the underside of the 'mouth' rake the shellfish into the bag. The number of dredges may vary depending on the power and size of the vessel, which may be up to 20m.

Suction dredge. Consists of a sledge dredge which is towed along the sea bottom and a suction pipe which transfers the cockles from the dredge to the vessel. Another method uses the suction pipe to blow sand clear of the shellfish which are then gathered by hand by divers.

For third country waters, the total allowable catch is the amount available to the EC.

N/A indicates that a quota was not allocated to individual countries.

Landings by U K vessels, total allowable catches, U K quotas and uptake, 1991-1995

For third country waters, the total allowable catch is the amount available to the EC.
N/A indicates that a quota was not allocated to individual countries.

Landings by U K vessels, total allowable catches, U K quotas and uptake, 1991-1995

Tables 25 - 29

As from the beginning of 1993, there was a requirement that all vessels of under 10 metres overall length should be licensed. An effect of this licensing was to bring a significant number of vessels onto the register, who had previously had their landings grouped. As a result, figures for the number of vessels show an abnormal increase in that year as compared to previous. This new licensing requirement for under 10 metre vessels has also had an effect on the coverage of the employment of fishermen. There is a discontinuity in the series between 1992 and 1993. While it is not possible to quantify this change exactly, the indications are that some 1,500 fishermen were included for the first time, while of the order of 300 left the industry during 1993.

The overall length of vessel is used in the production of these tables.

Scottish fishing vessels, number of vessels by length (metres), 1991-95

Table 25

Vessel size	1991	1992	1993	1994	1995
