

Water management issues in coastal areas
YPEP in Marennes Oléron (France)
From March 31 to April 4, 2008

As part of the activities supported by ENCORA, RFRC will organize a YPEP about water management issues in coastal areas which will involve at the same time:

- a ICAM local experimental project (Marennes Oléron)
- a SPICOSA study site (Pertuis charentais)
- Local water management stakeholders
- A national programme supported by the French Ministry of Environment about cooperation between scientists and local stakeholders in ICAM (DIRALITEAU).

The YPEP aims to contribute:

- to the definition of unified/common scientific and technical issues about water management in coastal areas
- on the ways and means for advancing the relationship between scientists and decision makers or local stakeholders.

ICAM week in Pertuis Charentais
